Introduction

It has been 20 years since *The Key to Speculation for Casino and Lottery Games* was published. This book has been out of print. In 2003, we were able to locate a copy, four pages were missing, 17, 18, 77, 78, but these pages did not effect the content. The book was in good enough shape to publish a revised edition of this publication. This book will not guarantee that you will make \$1 million. What it will do is cut your playing time to your most favorable period that you are aspected to win under, giving you the extra edge against the casinos.

If you play continuously in a casino, you will end up losing, as the casino has the odds in their favor. Casino and Lottery games should only be that...games...for recreation while taking a break from your daily routine, and if you happen to win, it will only be icing on the cake. This book has been designed to give you a good time at gambling resorts. When walking into a casino, before you make your first bet. The first question to ask yourself is why are you going to the casino to gamble, and are you subject to becoming addicted. Some people cannot play for an hour and then leave.

So, what is it that turns you on to gambling? Here are some of the reasons why some people become "casino addicts".

Is it for sexual compensation or out of boredom? Many gamblers with a boring job and the same routine every day, could look for an outlet that adds some excitement, therefore turning to gambling. To some, gambling could be an intellectual exercise. A great deal of study is needed to compile the stats.

Another reason, a desire of ones superiority over the forces of chance. The excitement factor is the main reason that gamblers are attracted to the casino. There's also the social factor of gambling. The joy of friends and acquaintances in a high society environment. No matter what category you fall into, you have to ask yourself if gambling makes you a better person or is it a destructive factor in your life.

How do you feel when returning from a casino? If losing bothers you to the extent that it has an effect on your life, than it is better that you seek out another form of entertainment. Gambling - like eating, drinking, etc. - satisfies a lot of the human needs to the extent where some people who never had any hopes of becoming a millionaire...do so overnight, but it is also something that can be habit forming.

The casinos know your weaknesses, this is why they decorate the casino with lavish surroundings, noise and excitement, to give you the party atmosphere...and who wants to leave a party while they wine and dine

you? Your looking for all the freebies and the excitement, and all the casino wants is the money you walked in with. This is why many casinos will extend large amounts of credit, even to people who normally could not get the same credit from their bank.

If you lose your money at a lottery, look at all the schools and services it helps. If you lose your money in a casino, look at all those beautiful hotels it goes to build. So, the next time you go into a casino, do a reality check. Know the odds and stats. Plan your casino vacation with the most favorable times to play, in between, schedule the shows you want to see, along with the places you want to dine and take a look at the local sites. This will make your vacation more enjoyable.

RISING SIGN / PART OF FORTUNE

You may have to read the section on the part of fortune two or three times before you fully comprehend it. Follows these simple rules to navigate you through.

1. To find the rising sign, let's say it's March 4, 1989, the time, 10:30AM. We find the rising sign for this period is 3, the sign of Gemini. After finding the rising sign of Gemini, only that portion of the part of fortune is where you want to go (where it says ASC, meaning the ascendant sign), and you want to find Gemini.

2. After you find Gemini, you want to find where the moon is. You can find this in a moon book, ephemeris or on the Internet. Websites like www.astro.com keep a daily chart on the home page. You can also make up a chart, free of charge, or download an astro clock that keeps you up-to-date minute by minute.

3. You also want to know where the sun is. March 4, it is in the sign of Pisces. Now, you're ready to find where the part of fortune is. By going to the part of fortune tables, looking up Gemini rising, the moon in Aquarius, and the sun in Pisces, equals to the part of fortune in Taurus. If your natal part of fortune (you can look it up the same way), or your ascendant is Taurus, this would be considered a favorable time for you to play. It is suggested that you look back at your big wins to determine where the part of fortune was at that time.

REVISIONS

In the original book, pages 92-127 were packed with lottery predictions that resulted in 17 six of six big paying lotteries. Since all these dates have expired. We've added templates for your pick-3, 4, 5, and 6 lotteries, along with different strategies to use, whether it be with the part of numbers, or your own selection.

The new revisions start on page 93. With the casino games, we have added a dinner roulette template that is easy to use. Using 12 chips, you place four chips on the 2to1 columns with an 'x'. The remaining four chips, you place on the split numbers.

Example: If #20 should hit on the wheel, you would put one chip over 5/8, 14/17, 23/26, 32/35. Then four chips on column one, and four chips on column three. Look for a wheel with one zero. There are some that do not use the zero at all, and this would be the best of all to play on.

We have added an additional Keno play, that is ideal if you are playing the Keno machine. The following is your **Keno Machine User's Guide**.

USER'S GUIDE KENO MACHINE

Many people travel to places such as Atlantic City, Las Vegas and Reno, and play the regular Keno games. What they don't realize is that the keno machine has a better payoff for the 5 and 6 spot than what the casino offers. You also have the advantage of moving at a faster pace as many of you that have played the keno game know it can get very boring waiting for each game. Playing the Keno machine you can create your own jackpot. Meaning, you don't have to wait for four sevens to come up or other combinations that you play on regular slot machines. You can also do some statistical analysis while your playing the keno machine.

On the keno machine there are 10 columns. Before starting to play, in a notebook mark down...column 1, 2, 3, 4, 5, 6, 7, 8, 9, 10. Column 1 will now consist of the numbers 1, 11, 21, 31, 41, 51, 61 and 71. Column 2 will consist of numbers 2, 12, 22, 32, 42, 52, 62 and 72. Column 3 will consist of 3, 13, 23, 33, 43, 53, 63 and 73. Column 4 will consist of 4, 14, 24, 34, 44, 54, 64 and 74. Column 5 will consist of 5, 15, 25, 35, 45, 55, 65 and 75. Column 6 will consist of 6, 16, 26, 36, 46, 56, 66 and 76. Column 7 will consist of 7, 17, 27, 37, 47, 57, 67 and 77. Column 8 will consist of 8, 18, 28, 38, 48, 58, 68 and 78. Column 9 will consist of 9, 19, 29, 39, 49, 59, 69 and 79. Column 10 will consist of 10, 20, 30, 40, 50, 60, 70 and 80.

After each play mark the columns having five or more numbers that have hit. Example: If number 5, 15, 25, 45, 55 and 75 hit, this means you have five or more numbers that hit in that row...and you mark a one in row five. You do this each time you play and each time a row has five or more hits, because after you start playing a selective row, you want to move over to a row where five combinations haven't hit. Also, you are making note of which column has the highest accuracy of hitting with five or more. Now you have the option of selecting your own numbers or Astrological numbers, and all you do is pick five numbers and mark them on your card.

As an example, if you want to play the numbers 1, 2, 3 and 7 mark the first digit of each row. In column 1 play 1, 11, 21, 31 and 71. In column 2 play 2, 12, 22, 32 and 72. Stay with this combination row to row. Example: If you were playing the 1, 2, 3 and 7 in column 7, you would play the 7, 17, 27, 37 and 77. This would cover the 1, 2, 3 and 7 with five spots in that row.

I've just illustrated the **vertical** way to play using five spots. Each hit will give you over \$800.00. Now I want to illustrate a **horizontal** method based on the three spot play paying \$42, and the six spot play paying \$1,600.00. You have eight horizontal line. The first line consisting of the numbers: 1 - 10; second, 11 - 20; third, 21 - 30; fourth, 31 - 40; fifth, 41 - 50; sixth, 51 - 60; seventh, 61 - 70; eighth, 71 - 80. To apply this method, you also need to bring a notepad to keep track of the three digit numbers.

Example: If you were playing a 2, 3 and 7, you would play a 2, 3, 7 in any of the eight rows, and you would be playing with the number ending. So if you played a 2, 3 and 7 in the sixth row, you would be playing numbers 52, 53, 57. If you were playing them in the eighth row, it would be 72, 73, 77. This is called the process of elimination. If someone is playing the machine ahead of you keep a note of where these numbers are appearing and what rows. This way, when you sit down to play, you'll know which row to start with or what rows are remaining that haven't hit the three digit.

Let's say you play the 2, 3, 7 in row one, and as your playing it happens to hit in row six. You mark off row six. Let's say it hits in row eight, you mark off row eight. Let's say it hits in your row with 2, 3, 7...you collect your winnings and move to one of the next rows remaining. Let's say you take the third row...you play 22, 23, 27. The object here is to keep playing until all the rows with the three digits hit, which you're collecting \$42 on if you are in the correct row. But once you get down to two rows which haven't hit the three digit, this is where the six play comes into focus.

Let's say rows two and seven haven't hit. Now you cover the numbers on row two of 12, 13 and 17 and in row seven of 62, 63 and 67. Now you have six numbers covered. Stay with these six numbers until one of the rows have been covered completely with the three hits or until you hit all six. If row seven should come in and hit with 62, 63 and 67 it would cancel the play of six, and you would take your winnings and start over again with the same process of elimination. The object here is to keep playing the three digits picking up payoffs of \$42, with the chance of hitting the six spot with the two remaining horizontal rows.

With the five spot play you're using the ten vertical rows, and the three digit play with the remaining two rows being played on the sixth spot, you use the eight horizontal rows. You have the option of using your birthday numbers, astro numbers or whichever is convenient.

The Numerological Factors

Numerology is a branch of Astrology. Much confusion came along with many different methods of Astrology—Hindu, English, Chinese, and Arabic. There were language barriers and other factors involved with the interpretation and the mathematics of astrology, so a new branch was born called Numerology. The same then happened with Numerology. It became very complex as more and more adjustments were made, making it more detailed as time went on.

The male and female or masculine and feminine symbols were designated to the odd and even numbers. The odd numbers were male and the even numbers were the female. A number or value was given to a certain planetary body as follows:

(a) Saturn	8
(b) Jupiter	3
(c) Mars	9
(d) Sun	1 in good aspect 4 when adverse
(e) Venus	6
(f) Mercury	5
(g) Moon	7 in good aspect 2 when adverse

The Sun and Moon were given two different numbers because of the important transits involved. The different numbers indicate certain patterns and in a transit, one number would be easier to understand than the other.

The signs were given values along with a ruling planet as follows:

Aquarius - Saturn - 8
Pisces - Jupiter - 3
Aries - Mars - 9
Taurus - Venus - 6
Gemini - Mercury - 5
Cancer - Moon - 2, 7
Leo - Sun - 1, 4
Virgo - Mercury - 5
Libra - Venus - 6
Scorpio - Mars - 9
Sagittarius - Jupiter - 3
Capricorn - Saturn - 8

People born under the influence of the Moon or the Sun have different paths to follow. The Ancient Egyptians divided the stream of life into two branches called Sun and Moon or Light and Dark paths. A person born between sunrise and sunset is said to be under the influence of the Sun and would follow the Sun's path and values. A person born between sunset and sunrise is said to follow the Moon's path and values.

Cycles were established to indicate fortunate and chaotic years based on numbers. The number 3 was given to a Jupiter point. This means that every third year of a person's life—ages 3, 6, 9, 12 (if born under the path of the Moon)—would be bad periods. If born under the Sun, every seventh year will be bad. There are different patterns according to the values the Ancient Egyptians used at the time. The planetary aspects also had values as follows:

Conjunction	1
Opposition	2
Trine	3
Square	4
Quintile	5
Sextile	6
Septile	7
Semi-square	8
Novile	9

The aspects, regardless of the degree, had certain values. These values were always broken down from the total value of all involved. For example: Semi-sextile=12. So if the Sun and the Moon were in semi-sextile, the aspects of the Moon, the Sun, and each sign would be added to get the total values for its definition or meaning.

Numerology was carried into the 19th Century from ancient times. We started assigning values to names and birthdates. The name value was not so important in Ancient Egyptian times as was the time of birth. The time of birth was set to indicate which number would be fortunate. The ascendant sign changes every four minutes on the Zodiac by one degree. Suppose a set of twins was born, one at 12:05 and the other at 12:10. They would have completely different personality, likes, and dislikes, because their ascendant times would be different. This also was devised in the 14th and 15th Century using numerological values, but has been lost for years and years.

Early numerologists also believed the day and the time of birth were two numbers which would signify fortunate periods within your lifetime. The Egyptians also had a system numbering each day of the week as follows:

Sunday	16
Monday	27
Tuesday	6
Wednesday	25
Thursday	12
Friday	15
Saturday	3

There are many changes relating to the decks of 72 cards associated with numerology, each card having a different meaning. This also holds true for the 52-card deck. They are all astrologically based and are all under the influence of numbers based on different astrological points.

In Shakespear's "The Exodus", there are three consecutive verses consisting of 72 principles known as the Kabalist, or Shakespearean hero. Each set was placed over the gates of the temple. There were six at each gate and three on each side facing north, south, east, and west. These represent the four quadrants of the planetary heavens. Each sign is divided into three decans of ten degrees each. These are split into two sections of five degrees each. Therefore, there are 4 x 3 x 3 x 2 or 72 faces, each having its own description and characteristics.

Read the chapter on Roulette. You will notice that if you add all the numbers across, your total will equal the six value. Also look at the astrological significance of the wheel itself.

The Ancient Egyptians also had a method used to determine which days of the month would be the most favorable and which would be the most unfavorable. Looking at astrological aspects, they were able to determine with great accuracy, events and times in which tragedy or great fortune would occur. I have noticed that people do so much better at the casinos on favorable days.

How did they determine which days would be positive and which would be negative? They based their findings on the Full Moon. Look in an Almanac or on a calendar and find the dates of the Full Moon. Take the day the Full Moon falls and count the number of days from that point to the end of the month. For example: Using April 1982 the Full Moon appeared on April 3th. Counting from 3 to 30, we come up with 22 days. Then multiply the number of days in the month (22) by 30. $30 \times 22 = 660$. This means the only lucky day in the month of April is the 6th. It is double lucky, because our value of 660 has two sixes in it. If our total had been 512, then the 5th and the 12th would be the two lucky days. The value 611 signifies the 6th and 11th as lucky days and a 166 means the 16th and the 6th would be lucky days.

To determine unlucky days, take the number of days already passed before the Full Moon (7) and multiply by the number of days in the month. In this case, $7 \times 30 = 210$. Therefore, the unlucky days would be the 2nd and the 10th. If both lucky and unlucky days fall

on the same date, they will be neither lucky nor unlucky as they will cancel each other out.

Do the same with each month and see how it affects your life. Also watch the news, the stock market, the economy, etc. If you are planning a trip or are doing anything important, it is good to do it on the right planetary cycle period. Watch for the good days, do your speculating on these days, and see what happens. The Ancient Egyptians deeply believed in this method and the astrological aspects bear them out.

It would take an entire book to give you just the elementary data on Numerology, but we are concerned with numerology as it relates to casino gambling. Numerology is a very important tool, especially for those who do not know their time of birth. Like any science, there are exceptions to the rules based on other prevailing influences, but these come under a more complex math scale.

I will give you the basics, starting with the Ancient method, which was the best. There have been many reformed methods, but the one based on the Ancient method has proven to be the most accurate in my own research. I have applied the earlier methods to everything from casinos to commodities to the track.

As I mentioned before, there are two methods of taking a value. The first is based on the name. In numerology the alphabet is numbered 1 through 26. Add the total values associated with the letters of your name and reduce this down to a single digit. This is called your personal or personality number. We will be dealing with your birth number. Your birth number represents your cycle of life itself. People have lucky and unlucky numbers. The unlucky numbers are based on the placement of Saturn at the time of birth. When your lucky and unlucky correspond, we get into a technicality, giving you both positive and negative reactions when speculating. Depending on the transits and aspects, this means your day will be either lucky or unlucky—a split day.

Many of you will find you have a certain number, but it is not always dependable. There is a reason behind this. Look at the yearly tables dating from the year 1900 to the year 2000. It gives you the approximate period in which Saturn is in a Zodiac sign and the value of that sign. That number would be considered your unlucky number. Days which add up to this number would be considered unlucky for you. Your lucky number is indicated by the planet Jupiter. Look up the year of your birth in the tables we have of Jupiter. This will give you the sign and the number value of that particular year. This will be your lucky number. For example: If you were born on November 16, 1931, you would have your Jupiter in the sign of Leo and the corresponding numbers are 4 and 1, 4 relating to your favorable days and 1 relating to your unfavorable days. The unlucky number for November 16, 1931 would be 8 because Saturn would be in Capricorn. This means that days totaling 8 would be negative and those totaling 1 or 4 would be positive.

This is how numbers were assigned back in Ancient times, but the art of numbers relating to planets was lost since that period and this is the first time the method has arisen since the 14th Century. Many books about this method were destroyed; I happened upon this method by accident while I was doing research.

In my research, I have also calculated the days in which people experienced sorrow and difficulties, and days which were lucky for them. I noticed a pattern developing and the values seemed to be the same, but when I saw the personal charts, I found the value corresponded to the sign Jupiter occupied for the positive times and the sign Saturn occupied for the negative times. I continued to do research in this area and found my conclusions to be quite accurate. Checking the library for Ancient history, I could see the correlation to Numerology.

The method of matching each planet in your chart with a number represents such things as your thoughts, emotions, and feelings. These are based on the positions of the planets in your chart and the numbers assigned to each. The total of the numbers in your chart add up to a single digit relating to your whole personality. Events are indicated by numbers in the chart. You must remember this was the

only way Ancients could communicate in a universal language. These became cycle numbers, known also as personal numbers. Each number is found by adding the numbers corresponding to the month, day, and year of birth. It doesn't matter if you add single or double digit numbers to obtain your total. For example: If born November 16, 1931 add:

$11 + 16 + 19 + 31 = 77 = 14 = 5$ or $1 + 1 + 6 + 1 + 9 + 3 + 1 = 23 = 5$. The same single digit number is the result of each equation. Therefore, the number 5 is a cycle path within this chart, and on days adding to a 5 value, the cycle will be most dominant.

After obtaining your numbers from the tables of Saturn and Jupiter, find your birthdate number. You need to remember that anytime a cycle number falls on a negative number, you will have split results as one cancels out the other. This is also true of people who have Jupiter and Saturn in the same sign. This is called a conjunction and is negative in the chart. It will bring extremely beneficial sectors to a person's life, but also times of grief and catastrophe. The same results are pointed out by the numerology values, giving you two basic points to contend with. When you start to win or lose, this should tell you something. By knowing the factors before you play, you can have control over the game. The next chart is an hour chart for local time wherever you are in the world. It is based on the old Ancient Tables which relate to planetary parts. Arabic astrologers have the Part of Fortune which relates to the most fortunate time a planet will pass over a certain point. At this time, wealth and/or success will occur. There will also be parts of hours of which little is known and is only mentioned in a few books. For example: If your cycle is 5, Monday, from 12:00 Noon to 1:00 P.M. is a good time for you. The next good time for Cycle 5 will also be on Monday from 7:00 P.M. to 8:00 P.M. and also from 2:00 A.M. to 3:00 A.M. A 5 indicated on certain days points out your cycle highs. It doesn't necessarily mean riches and wealth will fall upon you, but does indicate the top of your cycle. You should do best on these days.

If the unlucky number is 8. This person should stay away from 8—hour cycle periods. Look at Sunday during a cycle 8—hour. From 3:00 P.M. to 4:00 P.M. and 10:00 P.M. to 11:00 P.M. are bad periods.

Use your lucky number(s) in speculating and don't forget to also use your cycle number. If you play your lucky number during a favorable cycle period, this number will be dominant during the hour of play. As an example: If you were playing on a Sunday between 8:00 P.M. and 9:00 P.M. at the craps table, the number 7 would naturally come up during the hour. This should aid you in playing Pass-line for the hour indicated. For your personal record, watch the table and note how many times the number 7 turns over in that period.

If you want to go for a longshot with snake-eyes, try the 2 period. For example: On Sunday, between 12:00 Noon and 1:00 P.M. we have the value 2 and snake-eyes will appear more during this period than during any other period. The planetary Division Values are very important because they relate to the exact minutes. This is a very important factor influencing the dice game, roulette, and the slot machines. When done right, the percentage is uncanny.

Every four minutes a change of one degree is added to the rising sign of the Zodiac. This means in two hours a full sign, or 30 degrees, would pass over the ascendant. (120 minutes divided by 4 = 30 degrees, or a full sign). For the time, hour and minutes, you will need to go back to the hour value tables. For example: We will use 4:10 P.M. Sunday. 4:00 P.M. has a value 9 from the planetary division chart. We will then look at Sunday and find the number 6 corresponding to Cycle period. Adding the 6 and 9 together, we get 15 or the single digit 6. If the time had been 4:45, the numbers 9 and 7 would be designated by the single digit 7 ($9 + 7 = 16$ or 7).

In my research I have found the following information to be very strong: Using the number 6 as an example of a lucky number, find a time during that period at 2(?) which will also have a value of 6. We know at 2:03 the 6 value is also in the planetary division and in the

PLANETARY DIVISION VALUES

11 P.M.	9	8	7	5	8	9	5
12 Midnight	4	4	8	4	1	5	4

hour value. Even though this period would equal a 3, the numbers 3 and 6 would be prominent with a double influence on the 6. At 2:36 we see another value of 6 indicated. For four minutes the person would be very fortunate in playing the numbers 3 and 6. This would apply to the dice table, roulette wheel, etc. You can see it is important you understand how to read these two charts, because they will play an important part in winning.

It is advisable to play only during positive periods relating to your numerological and astrological factors. Even though you may have the right method of playing, the human factor can easily get involved. You may change or alter something you shouldn't have, causing loss for you.

To make sure you understand, let's use another example: Take Thursday at 4:20 P.M. Looking at the hour chart for Thursday, we get the number 8 and we get the number 5 for the 20 minute interval. When we add these two numbers together we get the number 13 which is equal to a 4 value. The numbers 4, 3, and 1 will be dominant and the person will do best when playing on a day with a value of 8. But looking at the tables, we do not find a 4. Therefore, we do not recommend this person to play. Looking up the value, we see that at 4:12 and 4:40, the person would have his best luck.

The planet Saturn moves about four minutes, thirty seconds during a twenty-four hour period. The following is the Ephemeris of Saturn and Jupiter.

Bio-Rhythm Factor

Almost everyone is familiar with the bio-rhythms, but really do not understand what they are. Even today with all the research involved around bio-rhythms, the true study of the combinations of the physical, sensitive, and intellectual cycles haven't been explored. The physical cycle is every twenty-three days; the sensitivity cycle is every twenty-eight days, which correlates with the moon cycle, and being the moon rules over the emotions the sensitivity cycles fall right into place. The intellectual cycle is related to Mercury having a thirty-three day cycle. Now unless you know how to make up a bio-rhythm chart or have a biorhythm calculator, the average individual is lost when it comes to calculating bio-rhythm. Basically it is very easy to determine what point of a bio-rhythm activates a person's ability whether in sports, intellectual pursuits, and emotional feelings. Keeping a daily diary you can generally determine what biorhythm point activates you to win. As in example: In my own chart the physical cycle bio-rhythm nineteen has always been dominant. Two large wins in 1985, to date, have been on March 5th when my bio-rhythm was nineteen, also on June 28th with a biorhythm of nineteen. Matter of fact, all during the 1985 period, I've never lost on a bio-rhythm nineteen day.

This occurred in keeping a record of wins and losses on different planetary and bio-rhythm patterns, which I noticed on the 17th and 19th bio-physical rhythm was very prominent. Then when I could correlate this with the Part of Fortune, the Moon Cycle, the Planetary Segment Period, and all the other astrological factors—I could almost key in on an exact hit.

To find the physical pattern for birth unknown, all you do is start the year out with 1. The 1-23, then after 23 start over again. Like the enclosed example I'm using for 1985. In 1985, you have a pattern you can watch yourself on, plus other people such as sports figures, handicappers, etc.

Let's say for instance you notice that your wit is quite strong on physical cycles of eleven. Everytime you see eleven—like you will have on Jan. 11, Feb. 3, Feb. 26, Mar. 21, etc., you know this would be the best time to play.

Through my research, I have found that the physical cycle is somewhat more important than the sensitivity or intellectual cycle; but this could be different. What I recommend is that you make up a chart for all three rhythms and just carry them through year after year.

Even though eleven might be your actual bio-rhythm, this could stand for twelve or thirteen of an actual bio-rhythm from your birthdate; but by doing it this way you wouldn't need to know how to set up a bio-rhythm chart or a calculator. And it would help you to understand your own patterns and rhythms within yourself, also it would give you a deeper understanding of what makes you win or lose.

Physical Biorhythm Cycle for 1985, (Jan. 1, 1986 would start out with biorhythm 21, do the same 28-day emotional cycle and 33-day intellectual cycle.)

The Astrological Factors

The planetary segments, the moon and Jupiter cycle, along with the Part of Fortune are the most important astrological factors for winning at gambling of all types. At the moment of your birth there are indicators in your chart that represent your potential in life as to succeeding in the game of chance. Some people are gifted in many ways, some with patience, perseverance and others with negative aspects, give up after the first failure. If you remember how many times Abraham Lincoln failed before he made it. Some of us have to go through the process of learning by failing. Others seem to have everything handed out on a silver platter. Understanding the influences of your chart, you are able to overcome a lot of the hardship moving toward your dreams in life.

The fifth house is one of the strongest houses affecting speculation. Knowing the natal planets can sometimes help you to understand conditions around you. The person with Neptune in the fifth house could be cheated or could use deceptive practices themselves, depending upon the influence and the aspects of natal Neptune. They sometimes can look for an easy way out in ways of gaining finances. But this person might not get any enjoyment out of gambling becoming frustrated over losses and not looking at long term. Where self-deception becomes the enemy in speculation.

With Uranus in the fifth house the person wins unexpectedly especially in cycles, and has to understand the influences pertaining to this unusual planet. The only problem with the person with this aspect is knowing when to stop. As they can sometimes win but go for more and end up losing. They have to discipline themselves and learn when the cycle stops they stop.

Saturn in the fifth house can relate to disappointment; but by patience and research can they develop a pattern and overcome obstacles in winning. This person has to learn when to play at the right time. As they sometimes are subject to play at the wrong time letting that big win get away from them the day they don't play it. When they play small amounts of money they can win all night; but sometimes when they go after the big one, then it can work in reverse and they lose.

Mercury in the fifth house can lose by being inconsistent, and not having a worked out plan where they change their mind before placing the bet only to realize that the first bet was the right one.

Mars in the fifth house and also in the eleventh house, I have seen in many charts indicates the impulsive gambler. Generally when they are upset or something is bothering them they can relate to gambling more for the action and sport, than for making money. Even to the extent where they can borrow money to use in speculation. Where this person can become addicted or a slave to the gambling element itself. These people must learn to discipline themselves and be patient. If they cannot they should stay away from any form of speculation.

Venus in the fifth house or the eleventh house is usually superstitious about gambling, and will let the superstition influence them to win or lose, but they can be lucky at times with their intuition. This person must learn, is the intuition coming at the right time or is it a false notion. This is where the Part of Fortune plays a very important part in winning.

Pluto in the fifth house or eleventh house, the person generally has a fear of losing which will usually leave them broke when speculating. So one should think before speculating with this influence.

The Moon, Sun, and Jupiter in the fifth and eleventh house, these people can generally win by luck alone. But this doesn't mean they are home free. They are subject to cycles like everyone else and can

only do good under the planetary periods. Many people that hit big jackpots and lottery's and even at Keno have this influence in the chart.

Everyone generally takes a gamble one time or another and you should remember that in order for you to win in the field of speculation somebody has to lose. So you have to take your losses with a smile as well as your winnings. There is a type of professional gambler that likes to win and spend money; and then you have those that complain even when they win. There are also those that do not want to be bothered by anyone. And the habitual gambler that cannot stop, and that is addicted from the feeling he gets from losing.

The area of speculation covers commodities, stocks, horses, dogs, lottery's, casinos, and sports. And just like impulsive eating, etc., gambling also enters into the categories of weaknesses that people are subject to. And like eating or drinking, gambling should be disciplined just as a person would go on a diet. Discipline is necessary to prevent negative influences from overcoming the positive ones. Because no one will stay on a consistent winning streak.

I have seen some charts with Saturn in the second or eighth house that were very negative areas of speculation, and over and over I have seen many persons with great desire for wealth-money, the quick hit, but regardless of what they do something causes them to lose where they have to start over again. Once you realize the factors in your chart, you can use proper timing. What is the proper timing with the astrological factors? Well, we have the Moon, Jupiter, and the Part of Fortune. The way natal Jupiter sits in your chart from good aspect, and from its transit, will tell you.

JUPITER

Jupiter in good aspect to the sun generally shows a rise in the world where luck will be a factor in life. And they will be striving for possessions and the rich life.

With the moon and Jupiter in good aspect, this brings on social success and there can be gain through domestic areas, and also those affecting the performing arts.

The Mercury/Jupiter factor in good aspect. Success comes through law, the intellect and travel.

With Venus and Jupiter success through love and marriage, artistic, and talent.

With the Mars/Jupiter influence in good aspect success comes from business, enterprises, professional recognition giving one managing abilities, and also it's a good combination for drive and motivation.

Jupiter and Saturn in good aspect success generally comes late in life through patience and perseverance. Generally this is not what you would call a great wealth influence, but by being patient one can often meet the achievements that they have outlined for themselves in life. The best speculative area with this combination would be with real estate.

The Jupiter/Uranus aspect here we have a lot of the lottery winners as this brings sudden success. It give a unique talent and sudden changes in destiny.

The Jupiter/Neptune influence can cause disappointments arising out of success. Generally once a person meets their goals, they become not as happy with them as they were going after them.

Jupiter and Pluto in good aspect just brings an elevation pertaining to a position of power. If Jupiter and the North Node are in good aspect—there is gain through success in team work, sports. Jupiter in good aspect to the ascendant success through sales. And those people in power that can aid you financially.

Now the good aspects of Jupiter are from the trine, sextile points in the chart by transit. The natal points out what is given to you from Jupiter. The transit presents it to you at that time in your life.

When you look at the Jupiter in this book, and if you find that your natal Jupiter is in Aquarius, you know that when Jupiter is transiting the sign of Aquarius, Libra, or Gemini these would be exceptionally good because they are air signs.

Your earth signs are Taurus, Capricorn, and Virgo. The water signs are Pisces, Cancer, and Scorpio. The fire signs are Aries, Leo, and Sagittarius.

Other aspects in the Chart I have noticed to be good for winning are planets between 20 to 23 degrees in good aspect. Good aspects to Neptune, good aspects to the fifth house, also favorable aspects to the eighth house. All the above with the presence of the Jupiter transit are all favorable for winning.

When the moon approaches the midheaven of the chart, this brings on an intuitive emotional influence that lets you think clearly and decisive, enabling you to be at your best projecting trends, winners which can aid your financial status.

When speculating during any period always try to use the moon cycle, and to research. You can do this on paper yourself to determine the outcome.

In looking at the ascending sign table in the Part of Fortune chapter. This table will tell you what moon sign you should speculate under. Then when you correlate this with all the other factors for the big winning cycle.

To help you understand this more clearly the midheaven is the tenth house cusps. The influence from the ninth, tenth, and eleventh house cusps are moon trends moving up to high point on the midheaven. So the table is based on the equal houses. But even if you have an intercepted chart, the influence will still work for you.

If you have Aries on the ascendant—when the moon is Aquarius, Capricorn, or Sagittarius this would be a good speculative period with Capricorn being the best.

If you have Taurus on the ascendant—Pisces, Aquarius, and Capricorn are your favorable moon signs with Aquarius being the best.

If you have Gemini on the ascendant—Aries, Pisces, and Aquarius with Pisces being the best.

If you have Cancer on the ascendant—Taurus, Aries, Pisces with Aries being the best.

If you have Leo on the ascendant—Gemini, Taurus, and Aries with Taurus being the best.

If you have Virgo on the ascendant—Taurus, Gemini, and Cancer with Gemini being the best.

If you have Libra on the ascendant—Gemini, Cancer, and Leo with Cancer being the best.

If you have Scorpio on the ascendant—Cancer, Leo, Virgo with Leo being the best.

If you have Sagittarius on the ascendant—Leo, Virgo, Libra with Virgo being the best.

If you have Capricorn on the ascendant—Scorpio, Libra, and Virgo with Libra being the best.

If you have Aquarius on the ascendant—Libra, Scorpio, and Sagittarius with Scorpio being the best.

If you have Pisces on the ascendant—Scorpio, Sagittarius, and Capricorn with Sagittarius being the best.

Thus far we have the natal influence, the Jupiter influence, and the moon influence pertaining to winning.

The Part of Fortune

The Part of Fortune is the most important influence pertaining to winning large sums of money. Not only in the area of finances, but also in career. Advancement, real estate, love, and health all apply to the Part of Fortune, because it gives you an area that can be very fortunate. It's the element of timing in relation to the transiting planets corresponding to the gifts given to you from the chart. The Part of Fortune represents opportunity. A good analogy of this would be if I was to come to you, and tell you that this particular place in Arizona, there is gold beneath the ground and all you have to do is mine it and bring it up. The first influence we have is opportunity. You have the opportunity to gain wealth. Now, depending upon the action you take from this point relates to your success or failure. If you do not heed the invitation, then what good would be the Part of Fortune? Or, if you look for an easier way to make money not going through the trouble of mining the gold. What I'm trying to illustrate here, is that in any element of speculation one should have some knowledge of it. There should be time for research and planning, then apply the knowledge you receive to the Part of Fortune.

Now, the most important factor related to the Part of Fortune, is when the ascending sign is on the natal Part of Fortune. Using my chart as an example: If Scorpio is on the ascendant, which is everyday, this would be a fortunate period to do things that are very important on that particular day (my natal Part of Fortune is in the sign of Scorpio). The ascendant is the most important factor corresponding with the transiting planets, as what to expect. The Moon is the next important part. For instance, let's say you have the Part of Fortune in the sign of Virgo. Every time the Moon transits the sign of Virgo, this would be considered a "lucky" day for you, again, corresponding to the transiting planets.

Now, looking at the sign Jupiter occupies in your natal chart, this is the third most important influence with the Part of Fortune. Any time the Part of Fortune is transiting the second house in the degree and sign of your natal Jupiter, this is a very important factor related to unexpected gain financially. The next important factor is when the Part of Fortune is conjunct to your natal Sun. This brings power from the house that your natal Sun is in, also financial gain. The same influence works in reverse. Whenever the Sun is in transit and it conjuncts your natal Part of Fortune, this is another area bringing the element of luck.

If you have the Part of Fortune in the second house, you would have luck through finances when the transits hits that point.

In the third house, gain through travel and relatives. In the fourth house, gain through real estate. In the fifth house, gain through speculation and children. In the sixth house, gain through health. In the seventh house, gain through partnerships, marriage, etc.

The fifth most important part with the Part of Fortune, is from the conjunction to natal Venus. These are the major influences relating to the Part of Fortune that trigger off positive events. Statistics have proven this over and over with over 100 charts of big money winners, everyone...that means 100 percent was activated by the Part of Fortune. It was just the element of luck that the person speculated at the right time not knowing that the Part of Fortune was being activated.

To find the Part of Fortune, all you do is add the ascendant sign to the Moon, and subtract the Sun. All you do is remember that the sign of Aries counts for 0 or 360 degrees; Taurus 30 degrees; Gemini 60 degrees; Cancer 90 degrees; Leo 120 degrees; Virgo 150 degrees; Libra 180 degrees; Scorpio 210 degrees; Sagittarius 240 degrees; Capricorn 270 degrees; Aquarius 300 degrees; and Pisces 330 degrees.

When you look at a sign, let's say for instance the sign is Scorpio...you would start with 210 degrees then add whatever degree is in that sign of Scorpio. To illustrate what I mean, I will use my own chart.

In my chart I have 23 degrees of Sagittarius rising 10 minutes. Look at the sign of Sagittarius, and you will see which gives a total of 263 degrees and 10 minutes. Now look at the Moon. The Moon is in the sign of Capricorn. Capricorn starts at 270 degrees. Put 270 degrees and add 12 degrees 40 minutes. This gives us 282 degrees 40 minutes. We add this to the 262 degrees and 10 minutes, and we get a total of 545 degrees 50 minutes. Now we want to subtract the Sun. If you noticed, my Sun sign is at 22 degrees 59 minutes of Aquarius. Aquarius starts at 300 degrees. You add 22:59. This gives 322 degrees 59 minutes. When we subtract this we come up with 222 degrees 51 minutes, or rounded out to 50 for illustration purposes. Now the 222. Find what sign is closest to this point. We find that Scorpio starts with 210 degrees. We know that the Part of Fortune would be under the sign of Scorpio. Subtract 210 from 222, and we come up with 12:50. We know that the Part of Fortune is in the sign of Scorpio at 12 degrees 50 minutes.

Look at my chart and you will find the 0 with an X in the middle. This is the Part of Fortune. I also have enclosed in the chapter an easy to understand table that gives the approximate time the sign and house the Part of Fortune is in. First, I want to illustrate to you the importance of this Part of Fortune, and also how it has worked in charts of people that have won great sums of money.

When I first started researching the Part of Fortune in 1980, I was making bets on paper and playing on days aspected for me to win. I was generally playing \$2 and \$10 bets on trifectas and wins. I noticed I was hitting at lot of large trifectas between \$1000 and \$3000 based on this factor alone. It was only natural to think that this was luck. Then I started playing everyday keeping track, and accumulating the charts and data of people that won large sums of money. And the picture was still coming together whereby the Part of Fortune was still the strongest factor. However, I wanted a challenge whereby the odds were phenomenal. There was one such bet, the Pick Six. The odds of winning it is 1 out of 262,144. Meaning, if you were to play every combination to guarantee a win, it would cost on \$2 tickets \$524,288.

I had such an aspect that looked very promising on August 11, 1983. As the Moon would be on my Midheaven, and the Part of Fortune would be in exact conjunction to my Jupiter in the second house. So I gave the Pick Six a try on this particular day. The results...an instant hit. The pool was only \$23,031.20 on this night and there was two winners. The pool had to be split and both he and I took home \$11,515.60. This was the first test of the Part of Fortune. I didn't have any good aspect with the Part of Fortune for the remainder of 1983.

But an acquaintance of mine did, his name is Ed. If you look at Ed's chart, you'll find that he has the Part of Fortune at 15 degrees 59 minutes of Leo; sitting on the Midheaven in the sign of Virgo. This tells you that the aspects are there for him to win. On December 21st, he went to a Jai Alai Fronton for the Pick Six. On this day the Moon was in Leo in conjunction to his Part of Fortune, also moving to the Midheaven; Jupiter in Sagittarius going through a Jupiter return; along with Uranus into the first house; and Neptune the planet of giving strong hunches and psychic intuition. He played the first-six numbers that came into his mind, and ended up winning \$250,000 on this particular night.

In 1984, I carried this research into Loto numbers, and made predictions on different radio shows, etc. The results were still the same. The Part of Fortune was still the influence anytime I would make a big hit or predict the outcome of a lottery number. In the state of Florida we do not have a lottery, therefore I wasn't able to participate directly. By this time an advanced issue of the Key to Speculation for Casino and Lottery Games, was issued in 1984. As a result, all the research wasn't finished at this point and still had some testing. Another factor I noticed in my chart. When there was a double affliction of Saturn and Mars in good aspect, and the Moon was on the Midheaven or conjunct the Part of Fortune, this added to the Part of Fortune being activated. I had two of these influences on March 5 and June 28, 1985; and one minor aspect on Dec. 16, 1985. My first thought was to try to beat the odds again. This time with a \$64 ticket and picking two selections in each race and one selection in one race. I did this at two different tracks on this day...the Orlando track locally, and the Gulf Stream track in Miami. The pool in Miami was \$295,000. Everything I picked that day came in and paid almost \$300,000. I went to the local dog track and the pool was almost \$80,000. There was two winners that night, myself and another man by the name of Russell, who works at the track. I had no inclination that Russell was going to play that night, nor did he know I was going to play. I knew Russell from the track and as soon as I found out he had the other ticket, I had to get his birthdate to compare our charts.

As you look at the chart for the time the Pick Six was hit, Scorpio was on the ascendant at 12 degrees 42 minutes conjunct my natal Part of Fortune in Scorpio. Naturally, I had the conjunct aspect from transiting Jupiter to my three planets in Aquarius in the second house. The Moon on that night was in the sign of Virgo transiting near the Midheaven, between the Virgo and Libra point. All the aspects needed to trigger the Part of Fortune were there.

If you'll look at Russell's chart, he has the Part of Fortune in the sign of Pisces in the second house. The Sun was transiting the sign of Pisces conjunct. He also had the conjunct aspect from Jupiter in

his second house to the Sun and Mercury; and the Moon in Virgo conjunct the Midheaven between the point of Virgo to Libra. Therefore, it was no accident that these two charts hit this Pick Six on this particular night, both receiving \$39,628.60 each.

The next big test was on June 28, 1985. This time the Seminole track was opened locally. I made the predictions for the different tracks across the country plus the Seminole track. On this day I had Jupiter conjunct natal Mercury in the second house, which rules the mind. The Moon in the sign of Scorpio in exact conjunction to my Part of Fortune in Scorpio. Again, everything was well into place. When I went to the track that night, I had everything figured out and the regular numbers to play, as far as the best astrological factors relating to the dogs. When I was getting ready to leave the track, I had a strong intuition about my lucky numbers consisting of 1, 2, 3, 7 which have been fortunate for me. I looked at the book and picked up a side ticket costing \$16. The ticket that won was the ticket with 1, 2, 3, 7 paying \$31,999.50.

Through my research I've been involved in many forms of speculation. I've been involved in pools with other people where we would pick horses, dogs, etc., astrologically. The result was generally good with small payoffs. But when it came to the big one if not all charts were compatible, there seemed to be that one missing link, where we would get 5 out of 6 missing it by a nose. Just like the extra ticket I bought for myself on June 28, 1985. I recall one time at the track, the Part of Fortune was not present. But a friend of mine bought a \$2 ticket on the side just playing numbers, and ended up winning the jackpot. Therefore, the Part of Fortune still remains to be the key to speculation whether it be stocks, commodities, casino games, lotteries, horse, dog tracks it must be present if you're going to win the big money. But also it gives you an edge playing the picks of someone else that has the Part of Fortune.

I can recall quite a few times asking a person to give me any numbers that came to their mind from a selection of the best horses or dogs that were present. And they came in every time hitting all six. I remember once a Pick Eight was \$600,000. The person I was going to go in a pool with had the Part of Fortune aspected perfectly on this particular day, and for some reason changed his mind. If he hadn't changed his mind, he would have won \$600,000.

Many times you'll notice people that predict sporting events. If you can acquire their birthdate, you'll know when they have their Part of Fortune. When they make their selection that day, you would ride with their selection. You might be wondering if you can still win without the Part of Fortune being aspected in your chart? The answer is yes. However, a lot of times unforeseen obstacles will come in to alter you from playing selections on that particular day. I will discuss this factor in other chapters dealing with race book and sports book. The first thing in reading the tables I have enclosed in this chapter, is to find the ascendant sign and the Moon, which can be found in any yearly Moon calendar or Ephemeris at any newstand. To find where your Moon sign was at your date of birth, you can either order an Ephemeris or call the library for this information dating back to your year of birth. Most book stores carry Ephemeris.

The rising sign tables are listed from 1—12. 1 is Aries rising; 2 Taurus; 3 Gemini; 4 Cancer; 5 Leo; 6 Virgo; 7 Libra; 8 Scorpio; 9 Sagittarius; 10 Capricorn; 11 Aquarius; 12 is Pisces.

Remember, to subtract an hour if Daylight Saving Time is present. And going back to look at where your natal Part of Fortune is, you will also have to subtract one hour for Daylight Saving Time or War Time. Example: I was born at 4:30 A.M. War Time, which would make it 3:30 A.M. So, you find where 3:30 A.M. would be and you can see from the column it shows 1/21 to 2/19, we have number 9. Meaning, that Sagittarius is ascending during this period of 2—4 A.M. Again, remember if the number is divided by a dash the first hour, the ascendant is in that sign; in the second hour it's on the bottom sign. Now that we have Sagittarius, we know the Moon is in Capricorn. So look for the tables with Sagittarius on the ascen-

RUSSELL

dant. Next, we go down where it shows the Sun in Aquarius and then over to the Moon in Capricorn. You can see that this equals to the Part of Fortune in Scorpio, and it shows the twelfth house. Meaning, that the Part of Fortune would be in the sign of Scorpio in the twelfth house, if there was no interception in the chart.

I have an interception in my chart which would put my Part of Fortune in the eleventh house. But these tables are only giving an approximate position of the Part of Fortune, and not the exact position. Once you find where your Part of Fortune is, it's very important to know the Moon's influence on it by the sign the Moon, Sun, etc., is in the house can determine where most of your fortunate aspects will come from. If you don't know your time of birth, than your Part of Fortune will be of no use to you regarding yourself. You would then have to use it pertaining to other people or use rectification by keeping a daily diary, and correlating it to the Part of Fortune. The following is the Part of Fortune Tables.

PLANETARY TABLES

The Location Factor

You might be wondering what location has to do with winning or losing? If you've noticed in magazines and paper articles of people moving to different locations and finding new position, success, and happiness. And then read about those moving to a new location only to find disaster awaiting them by either accident, death, etc. Even the obituary column, you'll find that many people meeting death early just moved to that location within a year.

Every part of our globe is marked astrologically having its own chart. The only thing that changes this chart is its different birthdate, name change, etc. As you travel through each astrological zone your chart is taking on the energies of that location. Example: I will use the chart of Puerto Rico. As you can see, the chart looks like twelve blank houses. That is what a zone chart is basically. When the state, country or what have you incorporates, those planets are then set into that chart to determine the location destiny or changes that are indicated. When you move into a new location all you do is put your planets in that chart, and this will tell you what to expect.

The most negative planet in the chart is Saturn. So whichever house Saturn occupies would indicate your sorrow, delays, or problems in that particular location. This becomes extremely prominent if Saturn is in the same house in your natal chart. Therefore it would be an extremely negative area for you. Basically, you would place your natal Jupiter in the location where Saturn is. Doing this would neutralize the influence. But with this book we are mainly concerned with speculation. There are two factors in the chart which you need to concern yourself with...the Midheaven and Nadir.

The Midheaven is the cusp of the tenth house. The Nadir is the cusp of the fourth house. As we look at the chart of Puerto Rico, we find the Midheaven in Virgo. We know that Libra, Virgo, and Leo would be the dominating factor of the planets in these houses; on the Nadir, would be Aquarius, Pisces, and Aries. Saturn in any of these signs (can be found by looking at the Saturn tables), you wouldn't want to speculate in this location. If on the other hand, you have Jupiter, this would be a positive factor. The Sun in Virgo or Pisces on the Nadir would be a good factor.

The main planets you want to be concerned with on the positive side are: Sun, Jupiter, and Venus. On the negative side: Saturn, Mars; and Uranus if afflicted.

Say your a person with sun in the sign of Virgo, Libra, or Leo; Jupiter in the sign of Pisces; and Saturn in Sagittarius; Mars in Scorpio. Puerto Rico would be a good location with success.

I have made up a table for you with different casino locations throughout the world, with the midheaven points of the charts, that include the ninth, tenth, and eleventh house (with the tenth house being the midheaven which covers the ninth, tenth, and eleventh house). And the Nadir which covers the third, fourth, and fifth house cusp of the chart. After checking where Saturn and Jupiter is located along with your sun, this can give you some indication. For more information find where the Venus and Mars is in your chart to determine the full picture.

If you find you have a mixture of positive and negative this would only neutralize the influence for you in this particular area. The following is the table of different countries with the Midheaven and Nadir signs.

Card Games

Casino gambling has been prominent in European country's for hundreds of years. Such countries include England, Italy, France, and Germany before spreading into America. The European method of casino games has been handed down through history from early astrologers.

In France, fortune telling is the oldest form of card playing used in the game of chance. There are many examples among the French. *Le Passe-temps de la Fortune* was published in Paris in 1634. This was calf-bound volume with the arms of its original owner stamped in gold in the center of both covers. There is a greeting to the reader in the form of a rondeau. At the end of the book, the biblical prophets are explained in a long series of couplets. The space between explains the possible combinations of thrones. There are also pictures in full-page engravings of the signs of the Zodiac with an unusual decorative work around them. These cards foretold many people of events that would happen in that period. This the most mysterious of a number of such books giving valuable directions for fortune telling cards. The most famous of all the fortune telling cards of France are the D'Esteilla, late in the 18th century. They were supposedly very accurate in predicting during that period.

But the earliest of playing cards were recorded by the Chinese. The Chinese seem to have mastered another type of astrology in which certain years were designated to certain animals such as the horse, monkey, snake, etc. Early Korean cards were narrow strips of oil paper 7 5/8 inches long by 1/2 inch wide. They consisted of 10 cards of each the eight suits which were designated by man, fish, crows, peasants, antelope, stars, rabbits and horses. Korean cards were based on Chinese astrology. These Chinese cards were copied from Chinese notes or paper money, which originated in the Tang Dynasty—608 through 908—which still survives.

It is also said that the gamblers sometimes played with and for the actual bank notes. This is confirmed by a Chinese Encyclopedia of 1678, which describes leaves as Chinese card games as sung money (?)—the old Chinese money derived as it exists today. It is made up of 120 cards composed of four identical sets of 30 cards each. These cards are narrow, flexible strips of cardboard not more than 3/8 of an inch wide. There are 9 cards to each to the three suits representing the nine planets and the Fixed, Mutable, and Cardinal signs. There are also coins, strings of coins, and myriads of strings of coins, and three extra cards; the red flower, the white flower, and the old thousand, which are distinguished from the others by seals and inscriptions. These cards with their curious little portraits are known as the 36 Celestial Generals and the 72 Earthly Maligants. They were believed to bear such powerful magical charm that they were placed on the coffins of their dead.

As you can see, there was deep belief in the power of cards among the Chinese. The Chinese collected and demonstrated their great knowledge of astrology through their card system. One may wonder how they could collect so much astrological data so long ago, because all nine planets had not yet been discovered.

It seems that almost every area of the world has developed its own method of studying the stars and have placed it on cards. It has also been theorized that the European playing cards were brought over from India by fortune telling gypsies.

There are some interesting points relating to the Indian games and the Spanish game called Hombre. The Indian method of astrology is known as Hindu Astrology and is based on the fixed stars in our constellations. Their cards reflect the stars, also. In an early series of cards, we can see the backgrounds of the same color, whereas a different color is usually used for each suit—red, green, yellow, etc.,

representing the colors in the planetary system. There are twelve cards in each set numbered 1-10 and two court cards. One of the court cards of each suit represents one of the ten incarnations of Vishnu. The others show incidents connected with this particular incarnation representative. The people of India have always had a strong belief in reincarnation. Their cards reflect this belief. Hindu playing cards of the Persian-type had eight suits. They used the European suits of Hearts, Spades, Diamonds, and Clubs of thirteen cards in each suit. The aces and court cards were formed later.

Germany also had its own series of astrological cards, published in Nurnberg in 1656. The series consisted of only seven cards on colored wood blocks and show the orbits of the Sun, Moon, Earth, Venus, Saturn, Mars, and Mercury. The planetary drawings occupy most of each of the cards, but there are explanations in German at the bottom of each. There is also a book of instructions containing illustrations and two small engraved discs, one representing the Earth and the other representing the Earth's orbit. These are loosely sewn into the page.

There is also a later series of these cards in Nurnberg, designed by Johann Philipp Andrea, a mathematician in 1719. This series included a title card and a front-end piece card. He designed a 52 piece set with unusual German suit signs in addition to the constellations of the original series in 1656. Signs were printed on the cards, along with the orbit of each planet. There were also a 53 piece card set from Nurnberg which originated in 1685.

The 52 card segment had mixed astrological significance from the traditional American astrology and from the Hindu/Arabic astrology. As the cards transited into England, the same pattern was present. Many books on fortune telling stories were published in England.

Some of the most popular include *The Dreamer's Oracle Fortune Telling by Cards* and *Napoleon's Book of Faith*. These booklets explained all about the cards.

In 1665, a series of 52 fortune telling cards with two cards of explanations was published. In the upper left-hand corner of each card is the suit sign and a number of 1 through 13. The four suits represent the four seasons and the Air, Fire, Earth, and Water signs. Cards bearing odd numbers each have a circle with a sign of the Zodiac in it. The even-numbered cards hold thirteen numbered answers. Each King contained five-numbered questions. An example

ASTROLOGICAL PLAYING CARDS MADE IN NURNBERG, 1719

AN ASTRONOMICAL PLAYING CARD, FROM A SERIES MADE IN NURNBERG IN 1656

ITALIAN MINCHIATE CARDS
 The most twenty chosen

might be "Is the person loved or not?" According to directions, when a person desires to try his fortune, he chooses a question from one of the Kings. The elaborate process involving the other cards is described at length. The stars will give the answers. These were extremely popular cards, especially during the troubled years exceeding the fall of Charles. The demand for the cards could not have been greater.

There was also an alphabet game during this period. Each card had two rows of letters on it. Through the space in the middle runs a couplet. The unusual suit signs are placed diagonally on each card. The court cards and aces are marked by L, C, D, and M. Those of you who are into Numerology would understand the designation of these cards by these letters and their values.

In 1665, a directional geographic direction was assigned to each of the suits. The Hearts represent Europe; Diamonds represent Asia; Spades represent Africa; and Clubs represent America. Of what use the cards were in England was yet to be found. The astrological factors linked to the cards, to many possessed magic. Many people were able to read the cards to determine events not only in their immediate surroundings, but elsewhere, also. It was on November 7, 1684 that Charles II ordered all imported playing cards to be seized and condemned. What was known earlier would be subject to change.

In the period of 1780, England developed a set of arithmetical game cards. These cards possess different numbers based on planetary positions, and were a key factor in determining events in a speculated area. In the period of 1829, a new set of astrological cards originated in England with a total of 52 cards. England had become a very speculative country and the people were betting on almost everything. Standards are still the same today. The method of astrology used in England is still the same as it was during the 14 and 1500s.

In 1415, a set of astrological playing cards were painted for the Duke of Milan and later flourished into Italy. It is said they are still in possession of the family today and the set is a Minchiate Set. If this is so, an end would come to the old tradition which says the game of Minchiate was invented by Michelangelo to teach the children of Florence to think and count. These cards were developed from astrological influence of Arabic parts and the Hindu system with the American system. There were 97 cards in a Minchiate Set. The reason for the increase of the usual number of cards is because of the use of the virtues, elements and the signs of the Zodiac.

The coined suits are usually marked with cavaliers, knives, and monsters from the fixed stars. These fortune telling playing cards were made evident in the 16th century by a rare and beautiful book published in Venice in 1550. The title page reads *Le Ingeniose Sorte Composte per Francesco Marcolina de Fori Intitulate*. A reprint of this book was published in 1784 and pointed to the astrological significance of the cards.

As the use of playing cards transited to America, it became an art to be able to predict and win with cards. The fortune telling value started to decrease. Astrological knowledge had already been acquired by the Indians of this country. They had their own set of cards with four suits: Copas, Escudos, Espada, and Bastones. The ace was called an "As".

It has also been said that the sailors who traveled with Columbus who were gamblers, threw their cards overboard in superstitious terror of oncoming storms on their journey to America.

They regretted being so irrational after landing, and made other cards out of the copas tree. The Indians were greatly interested by these cards. The facts established from this point were published in a book in 1723 in Madrid. It was called *Historia de la Florida*.

There are many stories referring to the mystery of how card games came to America. Many of our card games played in casinos today are of foreign backgrounds. What was the real significance of the astrological and number values relating to cards?

In many books dating back to the 15 and 1600s, there are several stories about cheating at cards by dealing from the bottom of the deck. The cheating was similar to what is know today as computerized counting, etc., in the card area. Arabic astrologers basically knew when the best times to win were, based upon the movements of the planetary bodies. A numerological value was give to each card. These numbers were used to determine whether the movement was good or bad. In many cases of poker, a player would

discard the negative cards in his hand and was able to pull a positive one. It was a game to see who got the most positive hand. This is where the term "discard" came from.

In 5-card selection, the five cards were determined by an event or a future event with the probability of happening. The question now is this: With the vast knowledge many of these early astrologers had, what was the significance of the planetary signs, the Zodiac, and fortune telling aspects of the cards? Looking back, you should realize that these people did believe in the supernatural—life after death. This is especially true of the people of India, the Buddhist. But were they able to predict which cards would fall and show true ability in predicting? Could they actually predict the hand and the numbers that would fall at any period of time? In my research, I find this must have been the turning point where playing cards became a gambling device. Two or three astrologers would predict which numbers would appear and then determine which hand was the best in a certain astrological period. Going back in history, we find many events which astrologers were not only able to predict, but also see beyond to a point where they could alter or change the outcome.

I also found theories, values, and numbers used by people and continued to delve deeper into them. I did not have all the available data, but found reasons for all card games, whether it be blackjack, poker, stud, etc. There is a pattern for each and also a cycle. I have been looking over these cycles for a few years and have seen them turn out quite profitable as well as entertaining. I will go over some of the theories and meanings of the cards to help you to understand the astrological significance. This in turn will help you to determine which card will follow and whether you should stay in the game or fold.

Each card is given a value. Greek, Roman, and Arabic astrologers were especially fond of numbers involving cycles, names, and events. They gave everything a total astrological value, using 52 cards. The following are values given to a certain set of cards and their foretelling explanations:

I. Cards under the rulership of the Sun with the value of 1 are:

- a. Jack of Clubs—Represents a generous and sincere friend coming into your life.
- b. Ace of Spades—Noted throughout history as a very misfortunate card to receive and is called the Death Card.
- c. Seven of Clubs—A positive card representing good luck.
- d. Nine of Spades—A negative card relating to false friends.
- e. Two of Hearts—Positive card relating to success and good fortune beyond any explanation. In my research on this card, I once came upon a very unusual situation in a casino. The player turned over his cards and had a total value of 12. Both were one value cards—the Jack of Clubs and the Two of Hearts. He took a hit and received an 8, which was also a positive card for him. This just tied the dealer so he took another hit and received an Ace. So you can see what is meant by "beyond any explanation."
- f. The last of our 1-value cards is the Three of Diamonds—Negative card meaning litigation problems, disputes, and quarrels.

II. Cards under the rulership of the Moon with a 2-value:

- a. Queen of Clubs—Positive card representing a woman or a lovable person.
- b. Eight of Clubs—Positive card representing the urge for the gain of money.
- c. Ten of Spades—This is one of the most unfortunate and unlucky cards. It has a very negative influence and represents much misfortune.
- d. Three of Hearts—Negative card representing unwise decisions resulting in disaster.
- e. Four of Diamonds—Negative card relating to arguments.

III. Cards under the rulership of Mars with a 3-value

- a. Kings of Diamonds—Negative card representing deceitfulness and dangerous situations.
- b. Ace of Clubs—Positive card indicating wealth, financial gain, success, and peace of mind. I have seen this card produce very favorable results in Blackjack.
- c. Nine of Clubs—Negative card relating to disputes and hard feelings. It almost always brings negative results.
- d. Two of Spades—Negative card, bringing complete change and loss.
- e. Four of Hearts—Negative card. It is said that the person receiving this card will be single or unwed for a long time.
- f. Five of Diamonds—Positive card relating to prosperity in business and unexpected news of favorable nature.

IV. Cards under the rulership of Mercury with a 4-value:

- a. King of Hearts—A very fortunate card bringing generosity and gain.
- b. Ten of Clubs—One of the best cards for luck. Good fortune can come unexpectedly.
- c. Three of Spades—Negative card bringing unhappiness and misfortune.
- d. Five of Hearts—Positive card brings about change.
- e. Six of Diamonds—Negative card which results in early marriage along with unhappy endings. When I received a Six of Diamonds as my first card, I found I received only negative cards and was unable to win until I stopped and started to play in a new hour. So take heed when I say this card brings about unhappy endings.

V. Cards under the rulership of Jupiter with a 5-value:

- a. The Jack of Diamonds relates to unfavorable news, selfishness, and personal gain that reverses itself.
- b. Two of Clubs—Brings on direct opposition and complications.
- c. Four of Spades—Relates to temporary financial reverses. It also influences short illnesses.
- d. The Six of Hearts—Relates to indecision where the mind sways back and forth. It relates to desire to escape the responsibilities and issues.
- e. Seven of Diamonds—Relates to heavy losses, false rumors, and bad luck. I saw a player who noticed this card up on the dealer. He took a hit and with a Nine at the bottom, he busted.

It is important you remember the values of each section and what each card represents. This will help you to determine many plays.

VI. Cards under the rulership of Venus with a 6-value:

- a. Jack of Hearts—Positive card showing a friend of long acquaintance to be influenced and benefited by.
- b. Queen of Diamonds—Negative card represented by an aggressive woman and interference from the opposite sex, or loss from the opposite sex.
- c. King of Spades—Negative, also. Brings on greed and problems associated in obtaining one's ambitions.
- d. Three of Clubs—Positive card relating to a second or third marriage, but this card is a good omen.
- e. Five of Spades—This is the only real good card of the spade suit, bringing happiness either through business, marriage, or speculation.
- f. Seven of Hearts—Negative card which relates to false hopes, and impulsive and hasty promises.
- g. Eight of Diamonds—Relates to travel and marriage, and is a card representing gain.

VII. Cards under the rulership of Saturn with a 7-value:

- a. Queen of Hearts—Represents a loving woman or true love from the opposite sex. It is a very faithful card indicating many good things. I have noticed when the Queen of Hearts is present, the Three of Hearts will generally follow. The Queen has always been a dominant good card to whoever receives it. I have kept track of this card at the tables. Like the ancients believed, the promises were good.
- b. Ace of Diamonds—Positive card relating to wealth, financial success, fame, popularity and peace of mind. It is a funny combination, but I have seen many Blackjacks that were won with the Ace of Diamonds and Queen of Hearts.
- c. Four of Clubs—Negative card which stands for sudden misfortune or failure.
- d. Six of Spades—Brings on discouragement and worry.

There are twenty-six positive and twenty-six negative cards. These meanings and values of each card relate back to ancient times. Many of these values have been lost because much of the written knowledge was burned and destroyed over the ages.

In later chapters I will show you how you can determine whether or not you have a hand which can beat the dealer and what you can do about it.

There is a group of numbers associated with each other in relation to being positive or negative. There are also numbers that if totaled together, as in blackjack, will give you a total value which will help you to determine whether you will win or not. I will give you different methods you can use in different card games, giving you the advantage over the dealer.

Numbers from early Numerology that do not harmonize with each other are: 1 and 7, 4 and 5, 5 and 7, 5 and 2, 4 and 3, and 9 and 7.

Numbers that harmonize are: 1 and 4 or 8, 2 and 7 or 9, 3 and 5, 6, or 9, 4 and 1 or 8, 5 and 3, 6 and 3, 7, or 9, 7 and 2 or 6, 8 and 1, and 9 and 2, 3, or 9.

In determining the value of two or three cards, add the value of the cards to each other. For example, the Queen of Clubs has a value of 2, and the Jack of Hearts has a value of 6. Add these two numbers together for a total value of 8. It is important that you know the value of each card. If you were holding these two cards and received another one, i.e., the Queen of Hearts, you would then have a total value of 15, which reduces down to 6.

For your record, I have labeled the two card values for you so you can determine at a glance the value of any two cards. This is especially important in playing blackjack. The systems in this card game will give you the total advantage. Even in card counting, you are limited, because either you or the dealer can pull one of the remaining cards in the deck in which the dealer would still have the advantage.

It is important that you remember the odds in a casino. The only advantage you will have over the casino will be the astrological aspects the casino cannot detect.

Black Jack

Blackjack first received its name because the only combination considered to be blackjack was the Ace of Spades and the Jack of Spades. This was later changed to the game we now call Twenty-one. Any combination of a 10-value card with an Ace totals 21 and is paid off as blackjack.

There are usually six or seven players in a blackjack game. On the table in front of each chair is a betting area. Blackjack can be played with up to seven players or head-on, meaning player and dealer.

To start the game, the dealer will shuffle the cards and offer the deck to one of the players for a cut. In the event that none of the players wishes to cut the deck, the dealer will cut it himself and place the first card on the bottom of the deck, face-up, or in a box to his right, face-down. He then starts dealing to the players. He deals the first card to all players face-down and one to himself face-up. He deals the next round all face-down. Each player now has two cards. The object of the game is to add your two cards together, trying to get as close as to 21 as possible, or trying to at least beat the dealer. You are able to see one of the dealer's cards. His card which is face-down is referred to as a hole card.

If you received a combination of 21, this would be considered a "natural" or Blackjack, and you would turn your cards over and be paid 150% on your original investment. If you don't have 21, try to come as close as possible without going over. If you are satisfied with your two cards, turn them face-down on your bet in the betting circle. If you want additional cards, signal by brushing your cards towards you on the table. Add the cards the dealer gives you, and if you still need another card, give the signal again. When you are satisfied with your hand, place it under your bet in the circle. Any time your hand exceeds 21, you would be considered busted and would have to throw in your hand.

When everyone is satisfied with his hand, the dealer will draw a card and then determine the winner. If the dealer's hand is 17 or over, the rules of the game require him to stand. If his total value is under 17, he must draw until he has at least a total of 17. If he exceeds 21, he is considered busted and must pay off all players as winners. The player with the highest value closest to 21 is the winner. At such a time there is a draw between the player's hand and the dealer's hand, all bets stay the same and no one loses. The player also has options the dealer doesn't have such as doubling-down or splitting.

After receiving the first two cards, the player has the option of doubling-down or splitting. If he decides to double-down, his initial bet is doubled. He adds the amount to his initial bet and places his hole card on the table in front of the bet, face-up. The dealer will then give the player a single card, face-down. No other cards are given in the doubling-down method. The total of these three cards is what you will be going against the dealer with. A value of 11 is generally the best hand to double on because any card from 7 to a face card will bring you in range of a winning hand. In Las Vegas, a player is allowed to double on his first two cards. Other places, especially European casinos, have certain rules or regulations on doubling-down. Some may require that you double-down on either a 10 or 11. It is good to check the rules at each casino you visit.

If your first two cards are of the same value, you may want to use the method called pair-splitting. Some casinos may restrict the splitting of hands consisting of 10-values—Tens, Jacks, Queens, or Kings. Make sure you check the rules. Pair-splitting is a simple method. As an example, take a pair of Nines, both lying face-up on the table. The initial bet is placed on one of the cards and an equal bet is placed on the other card. One card is dealt face-up on each of

the two cards, giving you two different hands to bet. It is a good rule to play the hand on your right first, and then the other hand. Unlike doubling-down, you can draw as many cards as you wish on each hand. If you are splitting a pair of Aces, one card is dealt on each hand and the person cannot draw or split any further.

Another option the player has is taking insurance. After the cards are dealt around and the dealer's up-card is an Ace, he will ask if anyone would like to take insurance. An insurance bet pays off at 150%, which is equal to 1 1/2 times your original bet. For example, if you bet \$10 and take out insurance, you will get back \$15 for a total of \$25 (this includes your original \$10 investment). If the dealer did not have Blackjack, you would lose your insurance bet, but could win even money on your initial bet, for a total of \$20. The insurance bet is especially good on high-valued cards. Such cards include the Ace of Diamonds and the Ace of Hearts, which almost always guarantee a winning hand. We found through computer research that the Ace of Spades and the Ace of Clubs are not as dominant in Blackjack.

The last option a player has is to surrender. If you do not like your hand, you can give it up at one-half your bet. If you bet \$10 and didn't like your hand, you may give it up, forfeiting 50%, or \$5 of your original \$10 bet. You can only surrender your original hand of two cards. Not all casinos carry the surrender option, so make sure on this rule before playing.

Let me summarize the first few pages for you:

1. A player may stand on totals of 12 through 16, but the dealer must draw until the value of his hand is at least 17.
2. You have an advantage over the dealer when doubling-down, especially if there is still a lot of 10-value cards remaining in the deck.
3. Pair-splitting also gives the player the advantage to increase the size of his bet and actually change a bad hand into a good hand.
4. Remember, when you hit 21, you get paid 150% on your money. The house only wins the amount on the bet if he also has Blackjack.
5. You also have the option to take insurance or to surrender.
6. The only disadvantage the player has is being the first to make the decision. The player must take the risk of drawing a card or busting before the dealer does. This is where the value of the cards becomes very important.

If the dealer deals all around and neither player nor the dealer draws a card, the House would not have the advantage. If there are Aces remaining in the deck, the player has the advantage over the House. It is good to know where the cards are and when they are due to appear. An accurate card-counting method can be very advantageous to you, but can also act as a deterrent at a crowded table. Many card-counters will confess of nights they lost thousands of dollars.

Card counting gives you the advantage over a long period of time, but gives you no guarantee. Most Blackjack players are on vacation enjoying themselves and will not usually have the capital necessary to finance themselves through a card-counting method. I will enclose a few card-counting methods later on in this chapter. Research of these methods did not always produce positive results, and in some cases, the dealer was receiving the high cards. A count is basically the value of the card and the time you should be playing the game...everything runs in cycles.

Card-counting will give you at most a 1% edge over the House. There will be a 50/50 chance of either side winning; something like flipping a coin. A string of heads or tails will run, giving one player a clear lead over the other. You will only have an advantage when a method is devised telling you which is most apt to come up during a particular period—heads or tails.

I have found the advantage of knowing the value of the cards, based on the methods of early astrologers, to have a great effect on the game itself. Mathematically, the risk of playing first when you

have a total value of 12-16 is high whether you choose to stand or draw. In many cases of research, I have found the odds against the person making the first decision. Remember this when playing.

The player has the advantage over the House with all the options given—doubling-down, pair-splitting, take insurance, or surrender. These options will help you overcome the negative factors in the game because you are then able to increase your bet on good hands and double on hands that look very good. You are again able to tell this from the value of the first card you receive. You could say that Blackjack is in a way, like fortune telling, because you are actually establishing a method of reading the cards themselves. From them you can determine whether you will take a hit, stand, split or double.

In playing Blackjack at home, go over certain hands needing decisions. The following example should make things clearer for you: You have a value of 12-16. The dealer, showing 10, hits himself with another card and is forced to bust. Stop and look at what would happen if you did take a hit. In most cases, you would have lost. This factor relates to the cards and the way they move.

Many times through my research, I have seen many cards follow one another. You should see the Three of Hearts and the Three of Clubs follow close behind the Queen of Hearts and the Aces seem to draw out the eights. The Ace of Spades and the King of Diamonds bring out the Eight of Spades. The Ace of Diamonds generally draws out other Diamonds, especially the Jack. Cards seem to follow a pattern cycle. I have played many different games with many different decks, and the patterns were all the same. Cards just seem to follow behind one another. The reason is not know at this time, but from research I know certain cards follow a pattern. Is there a pattern of why cards fall or why cycles change the Law or Nature? I will explain the methods I have used which have worked extremely well for me. I have had many shows, hotel bills, vacation trips, etc., paid for from my winnings at the Blackjack tables.

Method No. 1

A card-counting device is needed to help you to determine your hand. At the table I use my chips to count cards with. I will explain:

1. In four decks of cards there is a total of 208 cards, 16 of which are Aces and 64 more which are your 10-value cards (Ten, Jacks, Queens, and Kings). These are the cards you will want to count.
2. You can keep track of the Aces as they fall around the table.
3. To count the ten-value cards, use your chips. Have a stack of six \$10 chips to represent 60 and a stack of 4 \$1 chips to represent 4, for a total of 64.
4. In another row in front of you, place \$5 chips and more \$1 chips to do your initial betting with. Also have a couple of \$25 chips on hand in case you would like to place a larger bet.
5. Divide 208 cards by the number of players.
6. Then divide by three to figure the number of hands that will be dealt.
7. Sit where you are able to see all the cards as they fall around the table. If eleven 10-value cards fall, remove a \$10 chip and a \$1 chip.
8. Place the \$1 chip with your others and place the \$10 chip on you bet. This way, no suspicion is drawn to what you are actually doing.

If you are playing for lower stakes, use six piles of ten \$1 and then four single ones. If you know approximately how many tens are remaining in the deck, you can judge whether to take another hit or to stand. If you and the dealer each have a total value of 16, you may decide to let the dealer take a hit if you know there are still a lot of tens left. But there are certain patterns relating to cards. In Chapter 8 on Card Games, I have given you definitions from the values of cards, the aspects, whether positive or negative, and the total value

of each card from its astrological aspects. These influences relate to the different planetary positions. There is a deeper, but more difficult way to use this method, but I will now introduce a pretty simple method to you that you can use to indicate the value of the dealer's hand.

Method No. 2

You could have cards, indicating a bad hand, but you will have something that he will not—you will have the knowledge of the value of that card. you might stand on a 12. If he also has a 12 with a ten underneath, he will bust.

Concentrate on the suits. The only negative cards in the suit of Hearts are the Three, Four, Six, and the Seven. All others are positive. The only negative cards in the suit of Clubs are the Two, Four, and the Nine. The rest are considered positive. The positive Diamonds are the Ace, Ten, Nine, Eight, Five, and the Two. All other Diamonds are negative. The only positive card in the Spades is the Five; all the rest are negative. Let's use an example: If you first card is the Ten of Diamonds and the dealer has a Jack of Spades, chances are, he will bust before you do.

You should also try to memorize the influences relating to the value of each card. Common sense is involved in figuring out the risk. If most of the 10-value cards are out and you have a total value of 13, you should take a hit. But, if you know the deck is still loaded with 10-value cards, you should stand.

Remember, the game of Blackjack is against you and the dealer. The dealer's only advantage is over the inexperienced player. this is why some casinos fear the element of card-counting, and why some will go from a single deck to a multi-deck. Look at the charts I have for each suit. The top row indicates the dealer's first card which is dealt face-up. The other row is the total value in your hand up to 19. Then we have the Ace through the Nine card and then doubles. The reason why the Four and Five cards are not included is because you would never split these cards.

If the dealer, for example, is showing a Five of Spades and you have a total of 16; take a hit. The chances of him receiving any good cards are nil. The Five of Spades represents the only good card in the Spades suit. If he has a Four of Spades showing, and you have only a total of 12, stand (indicated by the S). The H indicates to Hit, the D to Double, and the SP to Split. It is up to you to choose whether or not to surrender. Base your decision on the value of the dealer's hand and what cards left in the deck (card counting).

It is up to you to decide whether or not you should take insurance, also. It is best to take insurance on the Ace of Diamonds and the Ace of Hearts.

To further explain: The dealer is showing a Ten of Spades on top and you have only a total of 13. Notice that chart indicates to Stand. This result goes against all rules pertaining to Blackjack, but is the result of thousands of games. It has proven to be very significant in my research. Many times I have seen the Ten of Spades carry a Two underneath and then a face card for a total of 22. If the dealer has a Seven of Hearts showing and you have a total of 13, take a hit. If he has an Eight of Hearts showing and you have a total of 17, take a hit. The chances of you winning even on a good card are not so good, but the chances of taking a hit and winning are high.

You must realize that you will not hit every hand with every value. When the dealer is showing a card of good omen for him, he will usually win. But there are cases where upsets prevail as the result of taking a hit. The average person will stand on a value of 17 or 18, afraid of taking a hit. This is logical, but the aspects indicate you losing anyway, take a hit. If you have a good doubling hand and the dealer's face-up card is positive, indicating a good hand, do not double or split. This is where the indication of each card's value becomes dominant.

Why does this work? Again, it is unknown at this time, but we do know these cards were used for fortune telling long ago. Could it be that the first card dealt is an omen indicating a winning or losing hand? There are many things connected with the cards other than simply playing—what they represent, their values, etc. I'm sure you have heard the Queen of Hearts called Lady Luck. The Queen of Hearts is a good omen and generally indicated a good hand followed by other Queens. I've seen many double Queens under the influence

of the Queen of Hearts, therefore, she is indeed—Lady Luck!

Now you know how to count cards using chips. It is so easy to get sidetracked when using this method (by memory) in a crowded casino. Try to memorize the tables as well as possible by practicing at home. This will help you to spot cards and how they fall or follow. Familiarize yourself with the pattern of the cards by playing Seven-card Stud or Poker. It is also best to use your planetary cycle to give you the best time of day to play.

Method No. 3

1) Play during your compatible or favorable periods. You want your cycle to be at the highest point. The seat you take at the time is also important.

2) Organize your chips so you are able to count the 10- value cards. Sit where you can see all other cards being dealt.

3) Remember to watch the first card dealt by the dealer. This will determine whether or not you should surrender, double, split, or stand.

4) Use the tables indicated for each suit. The top line is the dealer's and the side line is the player's hand. Other factors should be considered, also. Remember that the dealer can break if the deck is still full of tens. When the deck is weak in tens, the chances of getting a low card is extremely good. There are 64 ways of hitting 20, 80 ways of hitting 19, 86 ways of hitting 18, 96 ways of hitting 17, and 86 ways of hitting 16, so the easiest combination to hit would be the 17.

Method No. 4

For those of you who prefer to count cards. It can be intertwined with Method One. We will start with a simple form of counting.

Add one point for the Twos, Threes, Fours, Fives, and Sixes. Leave the Seven, Eights, and Nines as they are. For any 10-value cards, subtract one point and subtract two points for each. Do this with each hand, coming up with a single minus or plus value. Let me further explain with an example: If you are playing with a 52-card deck and your first card is a Four, add one point. If the player next to you gets a Five, add another point, giving you two points. If the third card is a Seven, add another point, for a total of three. If the next card dealt is a Two, add one more point for a total of four points. If the fifth card is a King, subtract a point, leaving you with three. If the next card dealt is a Queen, subtract another point, leaving two.

To bet: For any value of plus one, bet one chip; plus two or three, bet two chips; plus four or five, bet three chips; plus six or seven, bet four chips. For any value of eight or over, bet five chips. This would be based on a single 52-card deck. You may run into problems when the game starts moving fast, making it difficult to calculate. Whereby, if you were only counting tens, it wouldn't get so complicated. This is a simpler method, but needs a little more practice to gather speed. Practice with friends at home.

If you are playing with a double deck, bet one chip on a value of three or more, two chips on values from four to seven, three on values from eight to eleven, four on values from twelve to sixteen, and for values over sixteen, bet five chips. When the low cards are few in the deck, the player has the advantage, but the House will have the advantage if the deck is low in high cards.

Method No. 5

This is a more complex method used by advanced card counters. This method deals with half values. The cards are given the following values:

Twos	+2
Threes	+2
Fours	+2 1/2
Fives	+3 1/3
Sixes	+2
Sevens	-1 1/2
Eights	0
Nines	-1/2
Tens	-2 1/2
Aces	-3

Here is an example of how this method works using a 52- card deck:

1st	card Six +2
2nd	card Three+2
3rd	card Four +2 1/2
4th	card Four +2 1/2
5th	card Queen-2 1/2
6th	card King -2 1/2

These six cards total up to a positive four. To bet this hand, whether using a single or double deck, bet one chip on any value of five or under; values from six to nine, bet two chips; values from ten to thirteen, bet three chips; from fourteen to seventeen, bet four chips; and for values of eighteen or over, bet five chips.

I don't recommend you try this method until you fully understand how to use and have practice it extensively. Counting methods can make you extremely nervous when it comes down to actually using them.

There have been many books written by mathematicians. Ken Uston is the man with the greatest reputation involving count systems. He wrote *Million Dollar Blackjack*, a book with good methods, but far too complex for the average person. Only a person geared to the type of mathematics he uses would be able to keep accurate count. In his book, Uston tells of how even he suffered many heavy losses. He spent much time mastering his system only to have controversy around him, restricting him from certain casinos, etc. This takes the fun out of the game. What use is this system if you aren't allowed to use it in the casinos. But for those of you who are interested in the more complex methods of card-counting, I suggest you read his book.

I feel certain card-counters such as Mr. Uston have ESP. Many institutes have studied elements of ESP. Research indicates that a person can determine what the next card will be after so many cards are turned over. The study is generally done with black and red cards, with the person indicating whether the card is red and black. The study then progresses to using numbers.

We researched the card-counting method with our computer and found it didn't measure up to all that was written about it. The cards you count will only come in cycles. So we won't delve too deeply into the card-counting methods. There are hundreds of such methods now on the market. The ones I have outlined seem to be suited for those interested in learning.

Method No. 6

The last method I will explain uses the numerological values in correlation and is very simple one. Certain patterns arise involving odd and even numbers and their compatibility with other numbers. Let's take an example: Your first two cards are Two and Eight, giving you a total value of 10. Two and Eight are even numbers. The possibility of getting a Four, Six or Ten as your third card is negative. You will more likely receive an odd number.

From the dealer's hand, you can determine whether his cards are odd or even. Assume that he has two of the same card, thus narrowing his chances of getting another like it. If he has a Seven facing up, chances of him having a Two, Four, Six, Eight, or Ten are not very strong. This will give him a possible winning hand. If his bottom card was a Nine and his top card a Seven, giving him a total of 16, he would have to take a hit. We know the possibility of him getting One, Three, or Five are not too strong because he would then have three odd cards. He will probably get a Two, Four, Six, Eight, or a Ten. So your chances of beating the dealer are very strong, as he will lose if he receives a Six, Eight, or Ten. Even though the possibilities of getting the 17 combination are strong, you will find the pattern of the odds and evens to work extremely well.

DEALER'S TOPCARD

	A	2	3	4	5	6	7	8	9	10
1	H	H	H	H	H	H	H	H	H	H
2	D	D	D	D	D	D	D	D	D	D
3	D	D	D	D	D	D	D	D	D	D
4	H	H	H	H	H	H	H	H	H	H
5	H	S	S	S	S	S	S	H	H	H
6	H	H	S	S	S	S	S	H	H	H
7	H	S	S	S	S	S	S	S	S	H
8	S	S	S	S	S	S	S	S	S	S
9	D	D	D	D	D	D	D	D	D	D

The second part of this method relates to the total value of your hand to the dealer's top card. Looking at the chart, you can see totals from one to nine and the cards from the Ace to a Ten, the Ace counting as one. The top row is the dealer's top card and the other is the value of your first two cards. For instance, a hand totaling ten would have a value of one. If the dealer has a Two showing, take a hit. As a matter of fact, take a hit regardless of what the dealer is showing if your value is only one. If your next card is a Six; $6 + 10 = 16$ or 17 . Now you should stand if the dealer has a Two showing.

To further explain, let's take another example: Your first two cards are a Nine and a Deuce; $9 + 2 = 11$ or 2 . If the dealer has a

Seven showing, look on the chart and you'll find a D under the Seven under the Seven dealer card and your Two card, which means Double. You can only take one hit. If you receive a 10- value card, you will win.

Using the numerology chart, don't split; only stand, hit or double. Sections marked with D stand for Double, meaning you get just one more card. The H stands for Hit, as many as you want. But after you receive a hit, add in the value of that card and to the box containing that value. If the box indicates to double, you must stand since you have already taken a hit. What if your first cards are Sevens; $7 + 7 = 14$ or 5 . Remember, we don't split using this method. If the dealer's card is an 8, the chart indicates you should take a hit. Let's say you receive a 14, take a hit, if you pull a Four, you have 18 or 9. The row containing 9 tells you to double, which of course you can't after a hit, so stand. Don't forget to go to the next row for your next move after adding in another value.

the probability of getting all even or all odd cards is weak with The exception of face cards. But cards from the Aces to Nines will be mixed within your first three cards. if you would like a certain card, i.e., a Two, and you already have two even numbered cards, the chances of you receiving a Two are nil. The numerological method of playing Blackjack is somewhat simplified and about the easiest system to use. Even though it is not proven to be more effective than Method No. 1, it is much better than the complex, technical systems on the market today. It is also enjoyable!

Poker: Seven Card Stud

The Gambler, a song made popular by Kenny Rogers, explains the game of Poker pretty well. Poker takes a lot of discipline, patience, and awareness. You play against other players in the casino, the casino taking only a percentage for the House.

Emotions play a big part in the game and each person exhibits his uneasiness of excitement in his own manner. Each player would be affected by his astrological chart, but there are also other factors you should learn to help you cut down on losses while you are waiting for the right hand. Make notes in your mind and observe the other players. The same players will generally win or lose all night. Watch for when the tide changes and play only during your planetary period.

You need to know when to start and when to stop. This is where the discipline come into play. Too many people don't know when to quit. Every cycle has an end to it. Fatigue and mental exhaustion tend to set in after hours of play. This has been a problem with Blackjack systems throughout the country—you have to play for hours and hours to come out a winner!

Everyone plays Poker a bit differently. If on a losing streak, some will play very erratically to try to recover losses. He may raise on every bet to make the other players think he has something. When the streak is tight, he starts running scared. He will play with very few chips and will almost fold on an aggressive bettor. Then there is the person who thinks he is on a winning streak because everything is going so well. He has the tendency to push his luck and tries to make the others think he has the best hand; that his streak is continuing. There is also the type who will play very conservatively to protect the winnings he has already received and the comical type player with a nervous laugh. The laugh is a result of a lack of confidence concerning his hand and can result in impulsive actions. This player will lose his concentration on the game, causing his energy level to drain, and will make many mistakes at the table.

You should never play Poker when you are tired or when your mind is occupied by other things. Concentration is a main factor because of the probable outcome of each hand. You are there to win; otherwise you wouldn't be playing. Many gamblers play for the challenge as well as for the money.

Of course, you will make mistakes, but just do the best you can. Know your hand, judge it, and play it. Don't be affected by the other players at the table and try to keep your emotions well balanced.

Poker was carried into this country by sailors from Asia and Europe. American Poker began in New Orleans in 1903. There are many astrological factors relating to Poker. The five card spread of the earlier fortune telling cards determined the five basic part of life. The five basic parts of Life are: Health, Love, Money, Longevity and Friends. How many times have you heard the expression, "It's in the cards"? This expression is based on these early fortune telling methods. You would need to have some knowledge of the fundamentals of Horary Astrology to understand this. When a thought, an idea, or even a phone call would come to a person, a chart was set up for that period to indicated if the thought, etc., was good or bad. A Horary chart was set up pertaining to a certain time or event. Early astrologers believed that if the event was to be good or if a certain pattern was to prevail, the same influence would also be indicated in the cards. They used the seven-card deck which referred to the seven planets known at that time—the Sun, Moon, Mercury, Venus, Jupiter, Mars, and Saturn. This game is known today as Seven-card Stud.

Many earlier cards had symbols relating to different patterns under a certain cycle. We will use many of the old techniques combining astrology and numerology. Sidney Omar's book, *The Thought Dial Way to a Healthy and Successful Life*, is based on the methods of our ancient astrologers. He mentions that we discovered numbers; we did not invent them. He also tells the reader to pick any three numbers he has outlined, add them up, and reduce down to a single digit. This number relates to the reader's subconscious thoughts. From this they can find lost articles, pick winners, know about love, friends, health—almost anything you desire to know. Once you understand this ancient method, you can correlate it with casino gambling.

You can always relate to the first card you started with. In one case of my research, I remember starting to play three different times during a twelve hour period. My first card was a seven each time. Keep records for yourself, whether playing with friends or in a casino. Take notes of what happens during each session of play. You will see a very strong and somewhat uncanny pattern develop.

By the year 1840, the 52-card deck had been adopted in America. From 1855-1860, some changes were made based on flushes and straights. Flushes were secondary to straights since a straight was the higher hand.

Five-card stud was made popular in 1865 by the Civil War soldiers. The joker came into the deck in the early 1870s. The influencing factor for this was a French game favoring wild cards, called *Migistia*.

The game of Seven-card Stud reached national proportion during the 1930s and 1940s. But people wanted more excitement so more games were developed. Some of these games include: Hold 'em (Las Vegas), Hold 'em High (Texas), Draw, Pineapple, Razz, etc. You will find these games in many casinos throughout the world today. As Poker spread through America, many different rules were established and finally a standard was adapted. In Poker of Seven-card Stud, your first three cards will determine whether you will win or lose. Knowing these cards will enable you to make the best bet at the right time, or get out when your hand is bad.

You must realize why the casino takes anywhere from 5% to a 25% cut from the pot. The casino has to pay for the space you play in, salaries to the dealers, equipment, electricity and must come out with a profit. As a general rule, the percentage must be posted. It would be best for you to play at casinos which take only a 5% cut.

After finding a casino with a low percentage, pick the table you prefer and look for the general rules. Don't be afraid to ask questions about buy-in price, table stakes, antes, etc. Try to find a game with a low ante and inquire about the betting limits. If you are entering the game with a low amount of money, even though you have a good hand, you may be forced out of the game because of the betting limit. Ask which card opens, high or low. Find out if you can sandbag, check, raise, or pick up checkered bets. Are there any House players in the game? Could you change your seat if you don't like where you are sitting? There is usually a local and a visiting crowd in the casino. You'll probably find the local crowd working together.

Roulette

The roulette wheel dates back to early astrological times to the area of Babylon. Arabic astrologers were basically responsible for what is known as the roulette wheel today.

Many areas of the world had different ways in combining astrology with numerology; hence, a roulette wheel was devised as a fortune telling method based on the map of the heavens.

Around the circle of the wheel you'll find 36 number plus zero. Thirty-six joined with zero represents the "360" degrees of the Earth's Zodiac.

The wheel is turned on a four-pointed cross, which corresponds to the four Cardinal points of the Zodiac and the four seasons of the year. The green felt represents the vegetation of the Earth and the influence of the number "9" represents the nine planets. The colors of the roulette wheel, red and black, correspond to the numbers, giving them either a feminine or masculine sign. For example: Mars is a masculine sign, represented by the color red. Numbers associated with Mars 9, 18, 27 and 36. All these numbers are divisible by nine.

The roulette wheel consists of twelve rows of three numbers each. The twelve rows represent the twelve signs of the Zodiac and each contain three numbers. Each sign also is divided into three decans.

Row number one contains the numbers 1, 2 and 3. They represent the sign of Aries, the second by Aries/Leo and the third by the Aries/Sagittarius influence.

We also find three groups of 12 numbers each which correspond to the Cardinal, Fixed and Mutable signs. Like cards, each number of the roulette wheel is significantly related to the future or the question being asked by the person spinning the wheel. It was believed the unforeseen forces and spiritual guides could correspond if certain series of number were brought about by spins of the wheel.

Through my research, I believe the roulette wheel was started in Europe and transited into China. The astrological value was lost through this move, as the Chinese had their own system for astrology. Many of the numbers could not be understood and had no significance to the Chinese.

So roulette became a game of chance. Even as a game of chance, roulette could have been founded by the early astrologers of Babylon. They had the knowledge and/or power to predict numbers which would come up.

Below is a list of the signs to the corresponding numbers each rules:

Aries	1,2,3
Taurus	4,5,6
Gemini	7,8,9
Cancer	10,11,12
Leo	13,14,15
Virgo	16,17,18
Libra	19,20,21
Scorpio	22,23,24
Sagittarius	25,26,27
Capricorn	28,29,30
Aquarius	31,32,33
Pisces	34,35,36

Moon rules over:	2,11,20,29
Mars rules over:	9,18,27,36
Venus rules over:	6,15,24,33
Jupiter rules over:	3,12,21,30
Uranus rules over:	4,13,22,31
Mercury rules over:	5,14,23,32
Saturn rules over:	8,17,26,35
Neptune rules over:	7,16,25,34
Sun rules over:	1,10,19,28

Feminine signs that rules over the color black are: The Moon, Venus, Uranus, and Saturn. The masculine signs that rule over red are: Mars Jupiter, Mercury, Neptune, and the Sun.

Uranus represents the roulette wheel ball because this planet, along with Neptune, revolves toward the Zodiac on its axis in the opposite direction of the other planets.

In many tests, I have seen the astrological factors work, but it is rather tedious to try to aspect every move of the wheel.

It is also known that a man by the name of Arthur De Course Bower, consulted Cheiro, an astrologer, and took with him to Monte Carlo, a working system of numbers. Two weeks later, headlines read that Arthur De Course Bower broke the bank at Monte Carlo three times one night! Through research, we find the man had more than just a list of numbers aspected for that night. There was also an indication of his cycle being at its highest point ever. The astrologer/fortune teller also used Extrasensory Perception (ESP), making it somewhat of a game played by the mind. Many early astrologers would have believed a messenger told him which number the ball would fall on. In turn, there was a significance to the Horary influence of the moment. Today, we draw up a Horary chart similar to this. If you ever watched the roulette wheel in a casino, had a certain number in your head, and that number appeared on the next spin; you would have experienced what early astrologers experienced and believed in so deeply.

In my research of the different methods of playing roulette, I have found some that work more consistently than others. To play, you need a completely relaxed state of mind, and you should stay with one method. Do not play on days in which the planets are not in harmony to you or when the planetary segment isn't right. There will be a high percentage factor against you. Added to the statistical factor, the chances are greater against you. Roulette should be taken as a fun game, not one in which tension is built. From its early beginnings, it has been a wheel of fortune.

In most American casinos, the house has a 5.26% edge on every bet made on the wheel. In Europe, the house has only about a 2% edge on every bet. This makes roulette unattractive as a speculative device in American casinos. It is simply looked upon as a fun game.

In roulette, the ball is spun manually by the dealer in a clockwise direction around the outer rim of the bowl. As the bowl slows down, the ball drops into one of the 38 numbers on the wheel. There are only 37 numbers on a European wheel. The number the ball lands on is the winning number.

The diagram on the following page shows the betting board of the roulette wheel.

a) Straight bet is on a single number, including the 0 and 00. The chances of winning are 1 in 38 in 100 spins. The odds against you are 37 to 1. To play, place a chip on any number of your choice, or place as many chips as you want on individual numbers. If any of your numbers hit, it pays 35 to 1.

b) Split Bet: Place a chip on two adjoining numbers. The chances of winning are 1 in 19 or 5.26 in 100 spins. The odds against winning are 18 to 1.

c) Street Bet: Place a chip on any three numbers. There are 12 rows of 3 sets. This bet pays 11 to 1 and the bet is equivalent to placing 1/3 chip on each number. The odds of winning are 1 in 15.

d) Square or Corner Bet: A chip is placed where four numbers touch. The odds of winning are 1 in 8. Chances of winning are 2 in 19 or 10.5 out of 100 spins. There are 22 possible corner bets and the odds against you are 17 to 2.

e) Line Bet or Five Number Bet: This bet covers the zeros and one, two, three, and pays 6 to 1. This is the only five number bet on the board, and is known as a sucker bet and is not recommended for play.

f) Line Bet or Six Number Bet: It pays off 5 to 1. The chances of winning are 3 in 19 or 15.8 out of 100 spins. The odds against you are 16 to 3. To play, place a chip on any 2 rows of 3. This covers six numbers and is equal to placing 1/6 of the value of the chip on each number. There are 11 possible six number bets.

g) Dozen Bet: Chances of winning are 6 in 19 or 31.6 out of 100 spins. The odds against you are 13 to 6. The dozen would be the first, second or third row of twelve numbers.

h) Column Bet: Pays 2 to 1 and has the same percentage of winning as the dozen bet. There are three columns: 1-34, 2-35, and 3-36.

i) Odd or Even, Red or Black Bet: Pays even money. Chances of winning are 9 in 19 or 47 out of 100 spins. The odds against winning are 10 to 9.

Each person is given a different color of chips. The chips have a set value and you purchase them from the dealer. They can be valued from as low as ten cents each in some casinos, up to the house limit.

There are many methods of play roulette, depending on how much time, effort, and patience you are willing to devote to the game. I will point out the best methods, starting with the simplest and ending with the more complex ones. I will then point out some astrological methods which are even more complex, especially to those who know very little about astrology, but will be beneficial to those having a knowledge of astrology.

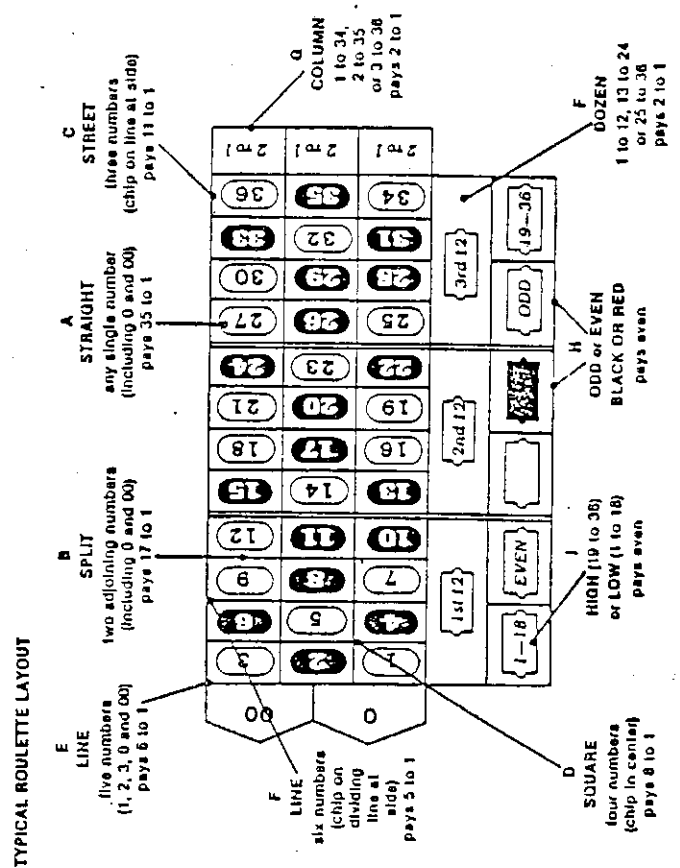

Method No. 1

Noticing the illustration, you can see three rows of twelve numbers each. Each row contains numbers which, when the two digits added together, can be reduced down to a single digit number. The numbers 1, 10, 19 and 28 correspond to 1. The numbers 7, 16, 25 and 34 correspond to 7.

Each of the three rows contain three sets of numbers corresponding to the nine planetary bodies.

For those of you who like action on every game, this is a method I have used and like. We will call the first column number 1, the second column number 2, and third column number 3. When a number comes up on the wheel that adds up to a certain value, leave out that value in that column and place a chip on the double line. This is called a split bet, and pays 17 to 1. In column 1, if the winning number was 25, $2 + 5 = 7$. So on the next spin, we will leave out numbers 7, 16, 25 and 34. (It is very seldom that the same value repeats in a planetary segment, but this will happen at times under a Moon Void-of-Course.) This leaves us the numbers 1, 4, 10, 13, 19, 22, 28 and 31 in the first column. Place one chip on the 1/4 line, 10/13 line, 19/2 line and 28/31 line. This will cover the whole column using four \$1 chips with split bets of 17 to 1. Then place four chips each on columns two and three. This is an insurance bet. If rows two or three comes in, we would get 2 to 1 odds, giving us \$8 plus our original \$4 for a total of \$12. If the numbers 1, 4, 10, 13, 19, 22, 28 and 31 comes in, we would get 17 to 1 odds. This will give us \$17 plus the \$1 we bet. The total profit on this bet would be \$6. The only way you would lose with this method, is if the green zeros or the value of seven came up.

There are certain casinos that offer Polish Roulette such as the Vegas World Casino in Las Vegas. This type of roulette does not use the green zeros. If one appears, it is considered a standoff, and the spin goes on. So this method would be best at casinos offering Polish Roulette. This method would also be advantageous at European casinos which use one green zero. It will keep you in the game longer and is fun. No great riches will come out of it, and you won't break the bank, but if you are looking for entertainment or dinner money, try this method. Ten or twenty spins of the wheel should earn you enough for a show or dinner. If you were to hit a \$6 profit ten times, you would earn a total profit of \$60 using \$1 chips.

A good rule to follow is after five hit, or \$30, leave the table and go to dinner.

Before going to a casino, try this method at home until you fully understand the total value method so not to be in a state of confusion. Remember this, column number one contains your total values of 1, 4 and 7; column number two contains total value of 2, 5 and 8; and column number three contains total values of 3, 6 and 9.

Method No. 2

You will use the same concept of method one, but instead of playing the 17-1 lines, you will play 4 exact combinations which correlate to the planetary cycle aspected for a certain segment cycle.

The one cycle is dominated by the 9 value. The number 6 dominates the two cycle, the number 5 dominates the three cycle, numbers 2 and 7 dominate the four cycle, the number 1 dominates the five cycle, the number 5 dominates the six cycle, the number 3 dominates the seven cycle, numbers 4 and 8 dominates the eight cycle. These numbers correspond to the values on the roulette wheel. The following is an example:

Look at the planetary segment chart. The cycle between 8:30 and 9:20 is a four cycle. Knowing the numbers 2 and 7 dominate, you play both of these combinations with the one column protecting you. On the first column, place a chip on the numbers 7, 16, 25 and 34. In the second column, place a chip on numbers 2, 11, 20 and 29. You would have four chips on column three. This will give you 35-1 odds. Hitting on column three would get your investment back. If you hit your key numbers on column one or two, you would get back 35-1; a total of \$36, if you were playing \$1 chips. This will give you profit of \$24 on every 35 to 1 you hit and a break-even point on column three.

When using this method in a planetary segment which only has one number, such as the one cycle segment which is represented by

the number 3. In column three, place chips on numbers 9, 18, 27 and 36. You will have 4 chips each on column one and two. This gives you leverage. A hit on column three gives you 35 to 1, and on column one and two, you would break even. You would lose if you hit on the green zero any numbers in the third column adding up to 9 won.

In this method, you will also be using the process of elimination. Using the third column as an example: If the number 9 was hit, leave chips on the numbers 18, 27 and 36. When the number 36 is hit, take the chip off that number. Do the same with the other two numbers and start the process over again until the cycle period is over. The same applies when using two columns with two combinations.

Method No. 3

Deals with playing the column in planetary segments. The first column will always be neutral, but the second and third column have many influences during planetary cycle segments. In cycle periods 1, 3, 5, 6 and 7, play columns one and three. In cycle periods 2 and 8, play columns one and two, and in cycle period 4, play columns two and three. Using this method, you have the odds of 2-1, and from my research, I find you get more hits in the two column during the planetary periods.

Method No. 4

Deals with 3 across and single numbers. Elimination can also be used in applying this method to the split numbers. In correlation to the planetary segments, use the Moon sign. This demonstrates the rows of houses which are influenced by the 12 rows to dominate a certain planetary period. The planetary aspects given earlier can be used in many ways as far as decans are concerned and the cycles in which they fluctuate.

Method No. 5

Deals with the sets of 4. The first 4 are your Cardinal points: Aries, Cancer, Libra and Capricorn. A bet on the first 4 in the planetary cycle segments 1, 4, 6 and 8. The second 4 are the Fixed signs and are dominant in cycle numbers 2, 7, 10 and 11. The last 4, the Mutable points, are dominated in planetary cycles by numbers 3, 5, 9 and 12.

For those of you who are not certain of or do not know how to read the planetary cycle tables, I suggest you take a piece of paper and number it from 1 to 9. When a planetary segment starts (date, day, and time) in a cycle period, record the top values, indicating the planetary aspects involved in connection with the period. If there are no prominent aspects, the numbers associated with that particular period in value, would dominate. If the values 7 and 5 were recorded three times each, these would be your dominant numbers relating to planetary aspects. Apply these two numbers to the columns as we did using Method Three.

Whether or not you understand anything about astrological factors, you can still determine which factors are present by keeping records of when each cycle begins. The factors will dominate throughout the planetary period. So, at the end of the cycle segment of 5 and 7, lasting from 40 minutes to an hour, you should have more values of 5 and 7 than any other numbers. Try this for fun at casinos, and see the influence of the planetary cycles themselves.

Method No. 6

When you have a group of people together, an energy field is being created. In my research, I find that many things happen in groups of cycles. All is not positive, though. An example would be air disasters. We find that all on the plane had death aspects were drawn together.

The same applies to the roulette wheel. People tend to play the same numbers or values. One night in Las Vegas, I saw the numbers 17, 26 and 35 being played very heavily. These people didn't even know that the 8 value dominated the planetary period at that time. It pays to watch which numbers are being played by a large crowd at the table. You will notice the same numbers hitting.

Could this be the theory of our early astrologers who said we are like planets because we have the ability to pull or influence? In many cases, human being influence each other; by thoughts, feelings, and actions. We are somewhat like the planetary bodies ourselves. I think this is why certain numbers are indicated within large groups, because of the magnetic pull of the mind. This is quite interesting and entertaining to observe when visiting a casino.

Method No. 7

By playing the most prominent aspect of the hour, you can play the group of numbers from one aspect to another. In my research playing during the same planetary segment period, not all numbers were exact or at the same exact times, but the research did warrant enough investigation in relation to the aspects.

For example: The numbers 2, 14 and 35 were the key numbers we were using. The aspects were relating to the squares. The square of 2, 14 and 35 are 18, 31, 19, 17, 32 and 20. After 2, 14 and 35 were hit, the other numbers were appearing quite regularly. All night long, the squares—25, 10, 27, 26 and 28 would then apply. This happened quite consecutively to warrant play. This means that under each planetary period, under each aspect, a profit was gained.

For those of you who have no knowledge of astrology, you could apply this method by watching or keeping records of the numbers that hit, which set each is in, and the numbers which follow. What is the aspect to the following numbers? They will tell you the dominating influence status for the night.

The same aspect applies in every case. It generally comes up in the next few spins of the wheel. In this case, a progressive system can be applied to the method.

For example: with five spins of the wheel, put \$1 chips on the numbers 1, 2, 4, 8 and 16. Start over again if none of these numbers hit. In very few cases will the numbers not show.

After analyzing the influences, let's look at the midpoints and other planetary factors involved. As certain transiting planets hit in the midheaven points certain numbers seem to show more than others. I will give you a list of the numbers and how they correspond relating to aspects with other numbers.

Three numbers are always in conjunction. On nights when the conjunction is prominent, the numbers in these areas will repeat themselves.

Numbers 2, 14 and 35 conjunct.

In semi-sexile to numbers 23, 4, 16; 26, 9 and 28.

In sextile to numbers 33, 21, 6; 7, 11 and 30. In square aspect to numbers 18, 31, 19; 17, 32 and 20.

In trine aspect to numbers 8, 12, 29; 34, 22 and 5.

In quintile aspect to numbers 25, 10, 27; 24, 3 and 15.

In opposition to the numbers 1, 13 and 36.

Numbers 23, 4 and 16 are in conjunction.

In semi-sexile to numbers 33, 21, 6; 2, 14 and 35.

In sextile to the numbers 18, 31, 19; 26, 9 and 28. In square aspect to the numbers 8, 12, 29; 7, 11 and 30.
In trine aspect to the numbers 25, 10, 27; 17, 32 and 20.
In quintile aspect to the numbers 1, 13, 36; 34, 32 and 5.
In opposition to the numbers 24, 3 and 15.

Numbers 33, 21 and 6 are in conjunction.
In semi-sextile to the numbers 18, 31, 19; 23, 4 and 16.
In sextile to the numbers 8, 12, 29; 2, 14 and 35. In square aspect to the numbers 25, 10, 27, 26, 9 and 28.
In trine aspect to the numbers 1, 13, 36; 7, 11 and 30.
In quintile aspect to the numbers 24, 3, 15; 17, 32 and 20.
In opposition to the numbers 34, 22 and 5.

Numbers 18, 31 and 19 are in conjunction.
In semi-sextile to the numbers 8, 12, 29; 33, 21 and 6.
In sextile to the numbers 25, 10, 27; 23, 24 and 16.
In square aspect to the numbers 1, 13, 36; 2, 14 and 35.
In trine aspect to the numbers 24, 3, 15; 26, 9 and 28.
In quintile aspect to the numbers 34, 22, 5; 7, 11 and 30.
In opposition to the numbers 17, 32 and 20.

The numbers 8, 12 and 29 are in conjunction.
In semi-sextile to the numbers 25, 10, 27; 18, 31 and 19.
In sextile to the numbers 1, 13, 36; 33, 21 and 6.
In square aspect to the numbers 24, 3, 15; 23, 4 and 16.
In trine aspect to the numbers 34, 22, 5; 2, 14 and 35.
In quintile aspect to the numbers 17, 32, 20; 26, 9 and 28.
In opposition to the numbers 7, 11 and 30.

The numbers 25, 10 and 27 are in conjunction.
In semi-sextile to the numbers 1, 13, 36; 8, 12 and 29.
In sextile to the numbers 24, 3, 15; 18, 31 and 19.
In square aspect to the numbers 34, 22, 5; 33, 21 and 6.
In trine aspect to the numbers 17, 32, 20; 23, 4 and 16.
In quintile aspect to the numbers 7, 11, 30; 2, 14 and 35.
In opposition to the numbers 26, 9 and 28.

The numbers 1, 13 and 36 are in conjunction.
In semi-sextile to the numbers 24, 3, 15; 25, 10 and 27.
In sextile to the numbers 34, 22, 5; 8, 12 and 29.
In square aspect to the numbers 17, 32, 20; 18, 31 and 19.
In trine aspect to the numbers 7m 11m 30; 33, 21 and 6.
In quintile aspect to the numbers 26, 9, 38; 23, 4 and 16.
In opposition to the numbers 2, 14 and 35.

The numbers 24, 3 and 15 are in conjunction.
In semi-sextile to the numbers 34, 22, 5; 1, 13 and 36.
In sextile to the numbers 17m 32m 20; 25, 10 and 27.
In square aspect to the numbers 7, 11, 30; 8, 12 and 29.
In trine aspect to the numbers 26, 9, 28; 18, 31 and 19.
In quintile aspect to the numbers 2, 14, 35; 33, 21 and 29.
In opposition to the numbers 23, 4 and 16.

Numbers 34, 22 and 5 are in conjunction.
In semi-sextile to the numbers 17, 32, 20; 24, 3 and 15.
In sextile to the numbers 7, 11, 30; 1, 13, and 36.
In square aspect to the numbers 26, 9, 28; 25, 10 and 27.
In trine aspect to the numbers 2, 14, 35; 8, 12 and 29.
In quintile aspect to the numbers 23, 4, 16; 13, 31 and 19.
In opposition to the numbers 33, 21 and 6.

Numbers 17, 32 and 20 are in conjunction.
In semi-sextile to the numbers 7, 11, 30; 34, 22 and 5.
In sextile to the numbers 26, 9, 28; 24, 3 and 15.
In square aspect to the numbers 23, 4, 16; 25, 10 and 27.
In quintile aspect to the numbers 33, 21, 36; 8, 12 and 29.
In opposition to the numbers 18, 31 and 19.

Numbers 7, 11 and 30 are in conjunction.
In semi-sextile to the numbers 26, 19, 28; 17, 32 and 20.
In sextile to the numbers 2, 14, 35; 34, 22 and 5.
In square aspect to the numbers 23, 4, 16; 24, 3 and 15.
In trine aspect to the numbers 33, 21, 6; 1, 13 and 36.
In quintile aspect to the numbers 18, 31, 19; 25, 10 and 27.
In opposition to the numbers 8, 12 and 29.

Numbers 26, 9 and 28 are in conjunction.
In semi-sextile to the numbers 2, 14, 35; 7, 11 and 30.
In sextile to the numbers 23, 4, 16; 17, 32 and 20.
In square aspect to the numbers 33, 21, 6; 34, 22 and 5.
In trine aspect to the numbers 18, 31, 19; 24, 3 and 15.
In quintile aspect to the numbers 8, 12, 29; 1, 13 and 36.
In opposition to the numbers 25, 10 and 27.

These are numbers represented on the wheel in aspect and in accordance to the planetary system, and which react as a pole on the wheel when certain planetary bodies are under certain influences.

To be more precise with this system, apply the aspects which prevail in each period to the numbers.

Numbers 1 and 10 are under aspects from the Sun.
Numbers 2, 20 and 22 are under aspects from the Moon.
Numbers 3, 30 and 33 are under aspects from Jupiter.
Number 4 is under aspects from Saturn.
Number 5 is under aspects from Mercury.
Number 6 is under aspects from Venus.
Number 7 is under aspects from Uranus.
Numbers 8 and 9 are under aspects from Mars.
Number 11 is under the Sun/Neptune aspect.
Numbers 12 and 21 are under the Sun/Moon aspects.
Numbers 13 and 31 are under the Sun/Jupiter aspects.
Number 14 is under the Sun/Saturn aspect.
Number 15 is under the Sun/Mercury/Neptune/Saturn aspect.
Number 16 is under the Sun/Venus/Mars aspect.
Number 17 is under the Sun/Uranus aspect.
Number 18 is under the Sun/Mars aspect.
Number 19 is under the Neptune/Pluto aspect.
Numbers 23 and 32 are under the Moon/Jupiter aspects.
Number 24 is under the Moon/Saturn aspect.
Number 25 is under the Moon/Mercury aspect.
Number 26 is under the Moon/Venus aspect.
Number 27 is under the Moon/Uranus aspect.
Number 28 is under the Moon/Mars aspect.
Number 29 is under the Moon/Pluto aspect.
Number 34 is under the Jupiter/Mercury aspect.
Number 35 is under the Jupiter/Mercury aspect.
Number 36 is under the Jupiter/Venus aspect.
Numbers 0 and 00 were mentioned earlier under the Moon Void-Of-Course.

By aspecting all the planets, you can see which aspects are more prominent which planets involved, and the aspects involved in the numbers that hit on the wheel—to determine single or double-digit number which will be most probable for the next spin.

Method No. 8

Use the planetary aspects and degrees in conjunction with the planetary cycle periods during each segment of the day. Take the length of the planetary cycle and divide it by 3. For example: If you have a cycle of 51 minutes divided by 3 equals 17 for each decan. This means the numbers present should hit in that 17 minute period with the earlier decan being the most dominant.

The following is a list of cycle periods and the numbers which are

the most dominant in each decan:

Cycle Period	First Decan	Second Decan	Third Decan
1	13	27	9
2	6	24	33
3	5	14	23 & 32
4	2	29	11
5	1	19	10
6	3	12 & 21	30
7	7 & 8	26	35

The number 35 sits at the end of the decan and influences other decans as they change.

You can use the decan method by itself by staying with one number. Remember to divide the planetary period by three, and only play those minutes on that particular number. Switch to the next number in the next decan. Apply the decan to the aspects by waiting until the aspects themselves correlate with the decan in which you are playing. Then, under the aspect in which the number shows up, you know your next number should fall within the next three spins.

This is a pretty complex system of calculating numbers and you should have this on paper before entering the casino. Know exactly what you want to do and when you want to do it. Wait until the key numbers roll up on the casino board until you place your bet. I don't care for the progressive system because of planetary cycles. Progression bets can drain you of all your capital before you know it. It works in some cases, but isn't profitable enough for what you must invest. It is best to wait for the right play before you make your bet. Try to plan it so you have the advantage; so that your number will show up within the next five spins. Another way is this: If you have a certain number in mind and already have seen 19 spins in which your number has not appeared, you have a 50% advantage. This means that if you had started playing that particular number from the beginning, it would have already cost you \$19. This way, you have a starting place on the wheel which guarantees you an advantage to win.

Still another method that can be used is to wait for 38 spins before playing your number. By doing this, you have put the odds in your favor. It takes discipline and there is no sure-fire method of predicting every winner on every turn. Our best success method of predicting every winner on every turn. Our best success was 1 out of 5, but this was an exceptional night. We didn't stay long enough to research this method to our complete satisfaction.

The astrological system worked best for us on our trips to the Bahamas and Las Vegas. But for beginners, I recommend Methods One, Two, Three, and Nine to be your starting points. These methods will familiarize you with number values and gives you leverage so you will be able to enjoy the wheel.

Many people do not like to sit and watch. They want action on every turn. There is nothing wrong with this if you're just there for fun, but why not go for fun and profit too? After familiarizing yourself with the game by using the easier methods, you may switch to the more complex ones.

Method No. 9

This method is best played during the seventh planetary period, and you should concentrate on the outside numbers from 19-36. It's very important that you keep track of the profits and losses so you have complete control at all times. The process is somewhat slow, but fun.

Start by placing one chip on the outside numbers. If you should lose, start the process over. If you should win, take the chip you win and place it with your other chips. You now have two chips riding on your next bet. If a number from 19 to 36 should appear, the dealer will give you two more chips, for a total of four chips. Take

one chip from your winnings and put it with your other two chips. You now have three chips riding on the numbers from 19 to 36. You still have your initial investment of one chip, so you are now playing with the House Money. If you are fortunate enough to win again, the dealer will pay you three more chips. Take one of them and put it with the other three, giving you a total of four chips for your next bet. Put the other two chips to one side; this is your profit.

Continue with this process until you lose. When you lose regardless of the point you're at go back to your original bet of one chip and start over. This method keeps you in action longer and can be quite profitable at times. During this planetary period, the outside numbers seem to dominate over the inside numbers by at least 2 to 1. To find out your ratio of winnings keep track of the planetary hour and what you can expect.

Method No. 10

This method is basically used in any planetary period and takes a great deal of patience. You must deal with percentages and putting them in your favor to equal an even number payoff on a single bet. After 26 spins of the wheel and your number doesn't appear, you will have a 50 percent chance of hitting during the next 20-26 spins.

You can also use a progressive system with this method. This means if you start out with \$5 on each spin, with a total of 26 spins (\$130), and your number appears by the fourth spin, you will get a total of \$175. From this point, you can raise your bet to \$10 on the same number. If it should hit again, raise your bet to \$15, and so on. Continue until a total of 26 spins has been completed.

On the next page there is a chart showing the probability of hitting one number on the American roulette wheel and the percentage of hitting on 1-38 spins:

Spin	Percentage of Hitting
1st	2.63
2nd	5.1
3rd	7.7
4th	10.0
5th	12.5
6th	14.8
7th	17.0
8th	19.0
9th	21.3
10th	23.4
11th	25.4
12th	27.4
13th	29.2
14th	31.1
15th	33.0
16th	34.7
17th	36.5
18th	38.1
19th	39.7
20th	41.3
21st	42.8
22nd	44.3
23rd	45.8
24th	47.3
25th	48.6
26th	50.0

This is the point where you break even on the wheel by the Law of Average.

27th	51.3
28th	52.6
29th	53.9

30th	55.1
31st	56.2
32nd	57.4
33rd	58.5
34th	59.0
35th	60.6
36th	61.7
37th	62.7
38th	63.7

Normally you would think the 38th spin would give you 100 percent. These are the odds of actually hitting any number.

Method No. 11

Black and Red. When you play black, play during planetary periods two, four, and seven. During these periods, bet two chips on the color black and one on the third column. This way, you have a total of 26 out of 38 numbers covered. If black should come up, you would get even money or a total of four chips. If black hits on the third row, you would get two to one odds plus four, giving you seven chips. If the third column should hit in the color red, you would break even and get two to one. During these planetary periods, you know black will dominate, giving you the winning advantage.

Play red in planetary period of one, three, five and six. Place two chips on the color red and one on the second column, giving you two to one plus even money for a total of seven chips. With this method, you still have 26 out of 38 numbers covered. Red is more prominent during these planetary periods. This guarantees you more success.

Method No. 12

Almost on the same concept of 11 but deals with the numbers five and six. Only play this system in the five and six cycle periods. In the five cycle segment period, play red by putting a chip in column two on numbers 5, 14, 23 and 32.

Then place four chips each on columns one and three. This covers 28 of the 38 numbers. With this method, you are mainly concerned with the five value numbers. A hit in the first or third column give you your total investment back. You will only make money if the numbers 5, 14, 23 or 32 hit. You can also play this by putting four chips on the red. This cuts down your advantage, but you can use the progressive system in case of loss.

Do the same with the number six. Place a chip on the 6, 15, 24 and 33. Also place four chips each on columns one and two. Again, you can put four chips on black and use a progressive system to prevent loss. You could also use the elimination process until all numbers have been eliminated in the planetary period. For example: If you are playing red, the numbers 5, 14, 23 and 32—if the number five is hit, you will have three chips on the three remaining numbers, etc. After your indicated numbers are hit, you should wait for the next planetary period to start again with the same numbers.

Method No. 13

The 1, 2, 3—Red and Black. With this method, you're only concerned with the numbers adding up to 1, 2, and 3. In the first row: 1, 10, 19, and 28; second row 2, 11, 20, and 29; third row 3, 12, 21, and 30. Now you wait until you see at least two of these values come up on the roulette wheel. Example: One hits, after one comes three...this leaves two. Meaning you would then put a chip on 2, 11,

20, and 29 until it hits. Keep a note on how the 1 and 3 values are doing because after you hit the 2, you switch back to 1 or 3. If the 1 hits, you would only have one column left, the 3. So you place a chip on 3, 12, 21, and 30. After this hits take your profits and leave.

You can apply your own rules as to how much you want to bet during each cycle of ten. If there are ten spins of the wheel, and the two still doesn't come up, you might want to double your bet to two chips and so on until it does. But set yourself a limit. Going to the planetary periods where the 1, 2 and 3 are dominant showing up more than usual.

While playing this method you might also want to play red or black on the cycle of 3, 4 or 5 to enhance your winnings. Just for the fun of it this is good to try at home so that when you happen to go to a gambling resort, you have your plan marked out of what your going to play...when and how.

I've given you a variety of different methods of playing roulette. Everyone has a certain method which they prefer over others. My methods are all based upon planetary periods. As I mentioned previously, it's best to play in your most favorable planetary period. There are at least two such favorable periods daily. If you are on a gambling vacation it's best to plan your entertainment around the planetary segment periods, to give yourself the best possible advantage when speculating at the roulette wheel.

If you're one who likes round-the-clock action it's best to go to other areas of the casino such as the Keno room or Bingo room, where the odds are extremely high, but the initial investments are low. You should still use the planetary numbers for those periods though.

Playing roulette at the wrong time can be very costly. All aspects should be in harmony with you at the time of play.

Craps

The men in prehistoric times played a game with a six-sided bone called an "astragalus." It came from the ankle bone of sheep and have been found in the ancient ruins of England, the ruins of Pompeii, in the tombs of Egypt, and even throughout China.

Even today, a national game in China called Nyout is played by moving object (men) around a circle according to the throws made with sticks about eight inches long, known as dice. This game is used on the fifteenth day of the first month for divination. Early in that particular month, a small book is sold in the marketplaces of Seoul. The book is about the correct planet rule, which carefully explains the meanings of all combinations of numbers thrown, and is written in Chinese characters and Korean text. The names of the moves are neither Chinese nor Korean, but belong to the language of the mountain people of the West.

Primitive man tossed arrows into a magic ring which he had drawn on the ground with proper rights and incantations. From the number combinations relating to the planetary movements, came factors used in guiding their journeys. Records from the eighteenth century tell us that the numbers two, three, and twelve were known as "crabs" and were under the rulership of Cancer. (Crabs entered the United States by way of New Orleans.)

Each value of the dice represented a certain degree of the zodiac, which presented a certain planetary movement. There are 36 probabilities. Adding a 0 to the 36 gives you the 360 degrees of the zodiac.

In biblical time and astrological periods throughout history, the number seven was the most prominent. There were more combinations of seven than any other number, and this number represented harmony. The two, three, and twelve combinations, known as crabs, were indications of good fortune. The number twelve represented the 120 degree angle, noted in astrology terms as a trine. The number three represented the semi-sexile, and the number two represented the starting point of the conjunction.

There are only two ways you can throw a three on the dice. The nine was not very prominent as it represented negative factors in relation to planetary aspects. Any degree adding up to a nine represented problems. A 90 degree aspect is a square, 130 degree aspect is an opposition, and a 45 degree aspect is a semi-square. Therefore, numbers adding up to a nine have significant influences

as far as the outcome of a certain event is connected.

The list of meanings for each number combinations is extremely long, so we won't give you all the factors. But, we will relate to you the probabilities of certain numbers appearing in the game. Also note here the name of crabs was changed to craps as the game became popular in the United States.

When looking at the layout of the table as illustrated here, you'll find we have a stick man, his responsibility is to call the game and control the pace. The box man at the opposite end of the stick man, supervises the game and deposits currencies in the drop box. The dealers at each end are the persons conducting the game. The Pass Line is where you place your bet if you think the shooter will win. If you think the shooter won't win, then you bet the Don't Pass. The next section, next to don't pass, you'll find the numbers 2, 3, 4, 5, 9, 10, 11, 12. This is called a Field Bet. You're betting these numbers will come up on the next roll of the dice. Where you see the word Come—this is the same as a pass line bet, but is made when the shooter has a point. Or, if he rolls out a four, you're betting he will make this four before seven or eleven appears on the dice.

Method No. 1—Pass Line Bet

When playing the pass line use the planetary segment which rules over the numbers 7/11. You can also use the numerology table and play in the segment which rules over number 7. Remember, you have four minute segments which dominate certain combinations. Look at your planetary division values in your numerology section, and you'll find that if you were playing at 3 p.m. this is a double seven. Meaning, that the hour rules over seven, and the minute period of 7:04 to 7:08 rules over seven. So in that four minute period, you would know that seven would come out on a roll. The same with 7:32 to 7:36. Let's say you're now playing in this period and you have a one unit bet on the pass line, that the throw will be 7 or 11. But let's say the thrower doesn't make 7 or 11, and rolls a 5. Now you want to double your bet with two units on the don't pass line, because you know the chances in this planetary period of him rolling a 7 or 11 is much stronger than him making a point.

Step Two—The Pass Line Bet. You have one unit on the pass line before the come-out. If the shooter rolls a point number or 4-5-6-8-9-10, then you want to take the odds on the point. On his next roll, you want to bet another unit on the come. If 4-5-6-8-9-10 is rolled, he takes one unit of odds on this number.

Step Three—The Pass Line Bet. You can observe each player around the table, to determine the cycle of win or loss. As an example, if a player is under a negative cycle in the segment period,

that player will lose continuously and would be an unwise investment for a consecutive run. But if one player seems to have luck with three or four runs consecutively, then during the period this person would be a good investment for long consecutive run, where you let your money ride.

Or, you can use some of the doubling methods that we have in the Baccarat chapter.

Method No. 2—Don't Pass Bet

On the Don't Pass Bet, you want to play in the planetary segments ruling over the numbers 2, 3, and 12, also in the numerology table of the planetary division values. Example: It's a Tuesday evening at 6:00 p.m. You know the numerology value is 3. During that entire period of 6:00 to 7:00 p.m. you can play the don't pass line if the other astrological values coincide with this influence. Again, you can use the four minute segments to play, and look for a run 3 to 4 on don't pass. If you're playing on a Tuesday at 6:00 p.m., you would want to start playing at 6:28 p.m. through 6:32 p.m. Or, you may just select to play the crap numbers of 2, 3 and 12. The odds for any craps is 8 to 1; the 12 is 30 to 1; the 2 is 30 to 1; and 3 is 15 to 1. Meaning that with four units, you can cover all combinations of 8 to 1 for any craps; 15 to 1 or 30 to 1 and 30 to 1. If the number 12 is ruling, you would pick up 30 to 1 for the 12, and 8 to 1 for the any craps during this four minute segment. Also while play the double pass line, keep a mental record of those individuals who are consistently crapping out and failing to make the win point. Remember, you always want to go with the trend that's at the table. It's always best to make mental bets and observe before actually getting into play so you are at ease with your decisions in these different planetary periods.

Method No. 3—The Field Bet

The field bet cover numbers 2, 3, 4, 9, 10, 11, and 12. You can play the field bets in planetary periods ruling over these numbers. But you don't want to play during periods ruling over 5, 6, 7 or 8. You must remember that field numbers can be made sixteen ways against twenty ways of losing. The bank plays double on 2s and 12s. I would suggest the best time to play the field bet, is during the segment of the planetary period ruling the numbers 2 and 12. You might also want to keep a diary of these four minute segments ruling 2 and 12, to keep an accuracy rate of how often they are hitting within the cycle. Thereby, giving you some statistical bases to go by. Remember, don't play the field bets in the 5, 6, 7 or 8 segment.

The best bets mathematically at the crap table are pass line bets, and take full odds on point numbers. Next, come bets and take full odds on point numbers. Then, don't pass bets and lay full odds against the point numbers. Then, don't come bets and lay full odds against the point numbers. Then, your place bets on 6 and 8.

I wouldn't suggest playing any of the hard way bets, because during a different planetary segment or numerology influence, this doesn't tell any significant way that the combination of that number will come out. Due to past research, I've found there isn't a consistent way for a person to win at playing numbers the hard way. If you're going to play the individual numbers of the dice, you want to play them in their segment period, only in a combination play. Also, if you find in a segment period the number 8 shows to be dominant, but the 8 comes out two times before the segment is about to begin, you might want to pass because sometimes the influences that are present could cause an early reaction period.

Once, during the period ruling the 2, the 2 came out five times in a row. So by keeping your own records of the single numbers, you can pretty well determine what your odds are during any one period. Remember, only play during cycles that are compatible for you to win, and play the game you enjoy the most not where you want to make the most, If craps is your game this is where you want to be in your planetary favorable cycle, and not at the slot machines. Keep this in mind when playing any of the casino games.

The Slots

Slot machines are found in all casinos throughout the world. They have become toys for adults. What makes these machines so popular is the payoffs from the progressive slots. Many times you will hear of people winning great sums of money on the slot machines, but many people who hear of these events do not realize the odds involved. There is a method you can use to put the odds in your favor, more so than they normally would be.

Part of our method was revealed on the television show, *That's Incredible* on November 16, 1981 by a gentleman who hit the progressive jackpot for \$1,000,000.00. He pointed out the fact that he used numerology, astrology, and mathematics in playing the slots. He waited a good three months before going back to Reno, Nevada to play his choice machine.

This man gave his date of birth as January 17, 1950. He was very aware of the value of seven aspected for the night he chose to go to Reno. The seven value became so important to him that the machine he played on had a seven in the beginning and a seven on the end, for a total value of fourteen which reduces down to five. The total value for the hour was also a five. Adding up the six, one, five, and two which again reduces down to five, you can tell he was at the right machine. So even though the odds can be greatly against you, the astrological and numerological factors can help you put the odds in your favor.

There are many types of progressive machines with payoffs of up to one million dollars. This gentleman was using a system to calculate how much money was going into the jackpot and when it would hit. Picture a progressive slot machine as an apple, a green apple on a tree. As it turns redder and redder, you know it's getting riper. But the key is to predict the exact point when it will fall off the tree. Some casinos will impose an upper limit on the progressive jackpots, and will not allow it to increase beyond this point. A casino of this type would be a bad risk when playing progressive slots.

In determining whether or not a progressive slot machine can give you that percentage of winning, there are a few things you must consider and calculate. First of all, what is the size of the jackpot? Then, what is the probability of hitting the jackpot? This can be done by calculating the number of wheels and the number of symbols on each wheel. For example: Let's assume you have a three-wheel machine with twenty symbols on each. To calculate your chances of winning multiply $20 \times 20 \times 20 = 8,000$. So your chances of winning the jackpot are 1 in 8,000. If the slot machine is a four-wheel machine with twenty symbols each, you would multiply $20 \times 20 \times 20 \times 20 = 160,000$. This means your chances of winning on this machine are 1 in 160,000. From this, you should gather that the three-wheel machine will give you better chances of winning. You can find how many symbols are on a machine in a number of ways. Ask a service man who is servicing the machine or someone in the slot machine department to help you. You can determine the amount of symbols yourself. So, the size of the jackpot, the number of wheels, and the number of symbols are very important. There are also progressive slot machines which offer two different jackpots called Double Progressive Machines. These machines alternate between the two jackpots. The advantage of these machines is that the jackpot will usually be big no matter which is hit. Knowing the chances of hitting a particular jackpot will aid you in the selection of the right machine.

Those of you vacationing in a particular area will run into problems as time will be against you, and you may have to search through many casinos before finding the right machine. The aforementioned gentleman took notes on each machine and then cal-

culated how many days and how much money would have been poured into the machine during this time. He figured the jackpot on his chosen machine would hit in three months, so he went back three months later. When on vacation, you may want to take notes on a particular machine and try to calculate when the jackpot will hit. It would be worth the money to go back for another visit at the predicted time and play that machine.

Another thing you need to know about slot machines is the denomination of coins and the number which must be played in order to be eligible for the Progressive Jackpot. Most machines require you to put three to five coins in to play and some require only one. The one-machine are quite common in Reno. The advantage of the multi-coin machine, is the fact that many tourists will not play the maximum number of coins in the machine. Since Progressive Jackpot keeps increasing until it hits, these tourists will just be feeding and increasing the jackpot, as they will not be inserting the correct number of coins. He can line up all the jackpot symbols, but he will not win the Progressive Jackpot. It will just keep increasing until it's ready for the hit with the correct number of coins. The person inserting the incorrect number of coins will get a much smaller payoff, even if he does hit the jackpot.

Other factors involving double progressive machines include the sequence the machine alternates in from one jackpot to the other, the size of the smaller payoffs, and how fast the jackpot increases.

The register is the readout device on the slot machine. The last two digits indicate cents and all digits to the left of the decimal are whole numbers. When the pot reaches a certain point, a mechanic must reset the register to zero. For example: If the progressive slot machines limit is \$1,000, it is reset when it reaches \$999.99. The mechanic will keep a record of the number of times the machine hits \$1,000. On machines that pay \$300,000 to \$1,000,000 when the machine reaches the certain amount, you've hit the Jackpot! It is important that you determine how far the progression is before you start playing. Then you must determine the size of the Progressive Jackpot and how much money you must insert per pull. For example: If the jackpot is \$200,000 for two dollars in coins, the ratio would be 1,000 to 1. If the jackpot was \$1,000, for a five-nickel machine, the ratio would be 4,000 to 1. Watch the slot machine for its astrological cycle.

The Big Six and Pan

The Big Six is a wheel with 56 positions on it. Fifty-four of these positions are marked by bills from \$1.00 to \$20.00 in denomination. The other two spots are marked with a Joker and a Super. If the wheel stops at the position marked Joker, Super or the name of the hotel, it pays from 40-45 to 1. All other stops of the wheel pay face value. The \$20.00 bill pays 20 to 1, the \$5.00 pays 5 to 1, etc.

The Big Wheel is a giant wheel that is easy to spot in any hotel. It is based on the same concept as the Roulette Wheel, and was also used as the Wheel of Fortune. The Big Wheel is now termed as the Big Six in many casinos.

You should go after the larger odds of 5 to 1 or more. If you wish to play the 40 to 1 position, you have four minutes in which the Law of Averages is on your side. I have seen this work extremely well in Las Vegas. Look on the Numerology Tables for a period with a four value and those which add up to four. These would be the periods you would use in playing the 40 to 1 position. If you are betting on the 20 to 1 position, play in the hour with a two value and the same

with the 10 to 1 and the 5 to 1 odds.

Pan is closely related to the game of Rummy. The methods of playing and collecting on the winning hands are different, though. Pan is played with eight decks of cards from which the Saturn and Mars numbers have been removed. The eights, nines and also the tens have been removed. Therefore, the seven is followed by the Jack. This game is fast-moving and fun to play once you learn the simple rules.

Each player is dealt ten cards and goes out with eleven cards spread on the table in spreads of three or more. A spread may have three or more cards of the same suit in sequence, or three or more cards of the same denomination in the same or different suits. Three Aces or Kings also make a spread. You are not allowed to put the draw card into your hand and you cannot use a discard card. A player can draw to any pair in his hand, and he can also draw to any cards in sequence to the same suit. Otherwise, he may not use the card and must offer it to the next player.

The player who goes out first, collects two chips from each of the other players as well as collecting for all the pay spreads in his hand. It is best to play this game in your most compatible astrological hour. You should also refer to the chapter on Poker as to the cards you should discard. The two games in this chapter are minor games played in the casinos, but you can still make money on them.

Video Poker

Almost any casino you go into today, you'll find video poker machines almost as common as slot machines. This is because of the addiction one has to video games in general. The casinos know there is a new generation out there that have been already programmed with computer game; therefore to make the casino more attractive for these new customers, you'll find more and more casinos will be going more toward video type games. Not only with video poker, you'll soon find that video machines will replace the blackjack tables. Whereby you will go to the Blackjack table and be able to pay against the machine instead of the dealer. And the same with many of the other casino games. There is also apt to be other discoveries and new type of games associated with the computer age, which will attract the next generation of gamblers. As you sit at one of these video games it's difficult to stop and leave, especially when looking for the straight flush or four of a kind. Let's examine the odds.

As you put 50¢ or \$1 in the machine, what are the chances that the first hand coming out will contain two pairs? It is only 1 in 20. Three of a Kind, 1 in 46; a Straight, 1 in 255; a Flush, 1 in 509; a Full House, 1 in 694; Four of a Kind, 1 in 4,165; a Straight Flush, 1 in 72,193; and a Royal Flush, 1 in 649,740.

Let's say your holding two pairs, the chances of improving the two pairs, is 1 in 12. If you have a Ten, Jack, King, Ace the chance of drawing an inside straight is 1 in 12. If you have a Ten, Jack, Queen, King the chance of hitting an open straight is 1 in 6.

Where a lot of people make mistakes playing these machines, is that they don't realize the chances of making a Straight, Flush, or Straight Flush. For instance, say you have the Ten, Jack, Queen, King of Hearts. By drawing one card, your odds are 1 in 4, that you will either make the Straight, Flush, or Straight Flush. I've seen many players with three cards in one suit—the Jack, Queen, and Ace of Hearts keeping the Ace to try and get a pair instead of trying for the Straight Flush. Remember, to get a Straight Flush on the first roll-out is 1 in 72,193. If you get four cards your chances are brought down to 1 in 4 of getting a Straight, Flush, or Straight Flush. You have to look at both sides of the odds in order to make a video poker machine profitably. When playing the video poker games all I can suggest, is like other games is to play in your best planetary cycle period. There isn't a unique strategy in predicting the outcome of these machines unless a daily diary is kept, where a pattern or cycle could be indicated. Therefore, when playing these video casino games, I suggest doing it for pleasure instead of going for the big jackpot. This doesn't mean settling for a Three of a Kind, when there is the possibility of making a Straight Flush or Royal Straight.

Keno

The game of Keno came to us through the Chinese who have made it popular over the centuries, especially in the 19th century. Keno cards are somewhat like Bingo cards with two sets of 40 numbers, numbered 1 through 80. A blower blows out balls that look like ping-pong balls with numbers on each. The announcer calls out the numbers and the numbers also appear on a lighted board. There are 20 balls drawn each game and you can bet on one to fifteen numbers. In return for a seventy-cent investment, you can win from \$2.10 to \$25,000. The only catch to the big \$25,000 win is more than one winner, it is split between them.

You must cash in your Keno tickets after each game. If you are there having dinner or simply relaxing, there are Keno girls throughout most of the casinos who will place your bets. During a twenty-four hour period, over 200 games are played. There is no time schedule, so calculations of playing certain numbers would have to be done at the casino itself.

Most Keno is played in a very relaxed atmosphere. Free drink are served and you are seated in a comfortable chair. This atmosphere is adequate and an aid in analyzing the planetary influences. Once seated, you are given a Keno card which contains 80 numbers. Mark the numbers you wish to play and indicate the amount you would like to bet in the corner of the card. Then give it to the dealer who will punch holes in your ticket with a device called a banger. He will give it back to you and then you sit and wait for the numbers to be called. When you win, take your ticket to the desk man who checks it and pays off the winners.

There are many ways to play Keno, and many, many combinations to bet. With an one-spot ticket, there are 80 possibilities. You have 3,160 possibilities on a two-spot ticket; 82,160 on a three-spot ticket; 1,231,580 with a four-spot ticket, etc. The odds of winning Keno are against you, but if you use the astrological factors, you can put the odds in your favor. Do not be lured in by the various combinations tickets, such as the six way, nine-spot ticket, and the one-way, ten-spot ticket. These tickets run your funds low and don't give you much advantage over astrological factors. The information on the ticket gives you the cost of putting all the combinations together.

A nine-spot ticket with twenty groups of nine-spot ways at seventy cents a ticket will cost you \$798.00. There is a total of 1,140 different combinations, but your winning potential will still be limited. I will outline each type of ticket and indicate the best and most successful ways to play.

Through my research in this area, I was able to come out ahead, but didn't hit any big jackpots. I played mostly the three, four, and eight-spot combinations. With the eight-eight spot combination, I had a total of six numbers come out which paid \$60.00. If I had played the six-spot combination with these six numbers, I would have made \$1,100. You have the best advantage of winning big money on the eight-spot card. Each Keno ticket costs \$.70, \$1.40, \$3.50, and up.

If you were to bet seventy cents on an one-spot ticket and win, it would pay \$2.10. If you bet \$70.00, it would pay 210.00. The odds of winning with an one-spot ticket are 1 out of 4. Before betting, go to your chart and find the ruling value for that hour. For example: At 10:00 p.m. on Sunday, the number eight would be dominant. If the minutes after are 16, add $1 + 6 = 7$, and add this to the $8 + 7 = 15$ or 6. Look down the sixth row, which starts with number 51, and play the number with a value of eight. Number 53 would be the number to bet. Then take row six on top and play the number with an eight

value which would be the number 26. Use these two numbers for your one-spot bets. Play with two tickets; one with 26 and one with 53.

A two-spot ticket pays \$8.00 on a \$.70 bet and \$42.50 on a \$3.50 wager. The probability of winning is 1 out of 17. Apply the method of finding numbers as you did with the one-spot ticket, only this time, mark both spots on one card.

A three-spot card pays \$.70 if you get two numbers and \$30.00 if you get all three numbers. A \$3.50 investment pays \$3.50 for matching two numbers and \$150.00 for matching all three. The chances of hitting two out of three numbers are 1 out of 7, and of hitting all three are 1 out of 72. Play as you would with the two-spot card, using the Planetary Hour value and the Numerology value.

The four-spot card, for a \$.70 investment, pays off \$.70 for hitting two out of four numbers; \$2.70 for hitting three out of four numbers; and \$80.00 for hitting all four. For a \$3.50 wager, the payoff is \$3.50 for hitting two numbers; \$13.50 for hitting three numbers; and \$400.00 for hitting all four. The odds of hitting two numbers are 1 out of 5; for three numbers are 1 out of 23; and for all four are 1 out of 327. There are a few ways to play the four-spot ticket. Anytime the first row is indicated to hit, play the number values; which consist of fourteen combinations. But the hour and minutes must correspond with the first row. Then use the tables with numbers adding up to 1, 2, and 3 on the first row and play these values. Play as you did with the three-spot, this time taking the total value of the Planetary Hour and playing those numbers in the row which total to that value. For example: If you are playing the three value, play the numbers 3, 12, 21, 30, 39, 48, 57, 66, and 75. Select any four of these numbers. Use these points from the Numerology and Astrology Charts, and play the value of the indicated hour. The five-spot card pays a total of \$340 for a \$.70 ticket and \$1,700 for a \$3.50 ticket. The odds of hitting five out of five are 1,551 to 1. Hitting three of the five numbers pays \$1.20, and \$15.00 for hitting four numbers. Look at the Numerology Chart and add together the values of the hour and minutes, coming up with a single value. Use five of the numbers from that series for your five-spot play. You can also calculate the rows to play as you did with the four-spot method.

The return for hitting six out of six numbers on the six-spot play is \$1,100 for your \$.70 investment, and \$5,500 for a \$3.50 investment. A \$.70 wager pays sixty-cents for hitting three numbers and the odds are 1 out of 8. The payoff is \$3.30 for hitting four numbers with odds of 1 out of 35, and for hitting five numbers is \$60.00 with odds of 1 out of 322. The odds of hitting all six numbers are 1 out of 7,753.

As the stakes and payoffs get higher, you can see how the astrological factors will aid you with probability.

A seven-spot card pays a total of \$3,500 on a \$.70 investment, and \$17,500 if you get all seven numbers on a \$3.50 bet. The odds against you hitting six out of seven numbers, paying \$230 for a \$.70 investment are 1 in 1,300, and the chances of hitting seven out of seven numbers are 1 in 40,779.

Going to your number chart, take the value ruling the hour and minutes, and play the combinations which correspond to that value. For example: If five is your number, use the numbers 14, 23, 32, 41, 50, 59, 68, 77—all total to the single digit of five. If you choose to continue playing with the same card and same seven numbers, you will want to use the Planetary Hour number from the Astrological Chart. The number values are based on the hour and minutes, and the Astrology Chart is based on the astrological factors pertaining to

it. If you play for more than an hour with the seven-spot combination, I suggest you use the Planetary value.

Playing an eight-spot card, if you hit all eight numbers, it will pay \$12,500 for a \$.70 ticket and \$25,000 for a \$3.50 investment. I like playing the eight-spot ticket the best because you have a chance of winning all the numbers and it gives you a strong potential of hitting a big win. Your chances of hitting eight out of eight numbers are 1 in 230,114; of hitting seven out of eight, paying \$1,150, are 1 in 6,250. Pick eight of the nine numbers, leaving out the one which doesn't qualify. Use the Numerology Chart if playing for four or five numbers. If playing for an entire hour, use the full value for that planetary period. At this point, look at the Part of Fortune. When the Moon is in a certain sign, you can play the numbers which fall under the rulership of the sign. This often works in connection with the Planetary Hour. If playing a smaller ticket, use the numbers which qualify from the Wheel and are in conjunction with the Planetary Cycle numbers.

With the nine-spot ticket, play all nine of the qualifying combinations. If you play and win on all nine numbers, you will collect \$12,500 for a \$.70 ticket, and \$25,000 for a \$1.40 investment. If you hit eight of the nine numbers, the return will be \$2,800 for a \$.70 ticket. The odds of hitting eight out of nine numbers are 1 in 3,682, and hitting nine out of nine numbers are 1 in 1,380,697.

Hitting all ten numbers on a ten-spot ticket pays \$12,500 for a \$.70 ticket and \$25,000 for \$1.40 ticket. The odds of hitting all ten numbers are 1 out of 8,911,703. Hitting nine of the ten numbers pays \$2,660 on a \$.70 bet and \$13,300 on a \$3.50 bet, and the odds against you are 1 in 163,381. The odds of hitting eight of the ten numbers are 1 in 7,384, and the payoff is \$700 for a \$.70 ticket.

An eleven-spot ticket pays \$12,500 for your \$.70 ticket with the odds against you of 1 in 62,381,864. Hitting ten of the eleven numbers pays \$7,500 with odds against you of 1 in 945,119.

A twelve-spot ticket pays \$25,000 on a \$.70 ticket for hitting all twelve numbers with odds against you of 478,262,940 to 1. The odds of hitting eleven numbers which pays \$5,000 are 1 in 3,978,237.

You can see how great the odds are against you as you increase on up to fifteen spots. When you get up to the tickets with this many spots, passing the nine-digit value, it takes away from the different methods you speculate with. I suggest staying with eight numbers or under. The odds are too greatly against you as the denomination of spots increases. Your percentage of winning is more favorable with the eight-spot ticket.

When you go to a casino, there will be plenty of time for you to decide which tickets to play, the numbers to mark down, the time to play, etc. It's probably best for the beginner to start out with the two digit game and work your way up. This will familiarize you with the game so you can learn how to put the odds in your favor. Your chances are 1 in 17 of hitting a two-spot ticket. Starting with lower spot tickets will also help you learn the fundamentals of the Astrological and Numerological factors which apply to the game. In Keno, the House takes a higher percentage of your winnings than in any other game.

Since the odds against you winning are so great, you should make use of the astrological factors. They will aid you in your game and maybe win you some big money. Another important factor is to select the best hour to play. As I mentioned before, the eight-spot ticket will be your best bet because of the big money involved, and enjoy yourself and still have the potential to win some big money. Remember, not to go overboard with large sums of money. Stay with betting from \$.70 to a couple of dollars a game, and also remember you drink free in the casino. So look at Keno as a relaxing game and enjoy yourself.

There are many methods you can select to play Keno whether with the 1, 2, 3, 4, 5, 6, 7, 8, etc., that you might want to select. When reading the chapter on Roulette, you can apply this method to the Keno game. Matter of fact, after the Keno game is over, you can

go to a Roulette wheel and mark down the first six numbers that are present at that time, and go back and play on the Keno board.

Perhaps the best method is using the same combination as you would apply to a lottery. When reading the chapter on the lottery, you have various numbers to select for every four minutes of play, if you wish. Many of the casinos, especially in Las Vegas that have Keno, have \$250,000 progressive, and also have a ticket whereby you can place a wager on ten games in advance. This saves the time of going back and forth between every game, and you can go once every ten games.

Also another unknown factor to many Keno players, is that Keno machines can give better odds up to the seven digits. As an example: With one number the machine gives \$3.00 as well as the other hotels. For two number hit, you receive \$15, at other hotels you get \$12. With a three number hit, the machine gives you \$46, the rest of the hotels will give \$42. These are all \$1 bets. For four numbers the machine will give \$91, for every \$1 bet. The Sahara will give \$115. The Barbary will give you \$125. The Stardust, Caesars and other hotels will give \$112. This is where on a four digit number, you can get a better deal from the casino game itself at the hotels.

As we go into the five digit number, the machine will give \$810 for every dollar bet. The Sahara and Barbary will give \$500. The Stardust and Caesars will give \$480. So if you're going to play five numbers it's best to play with the machine, because a Keno machine will pay over \$300 more than the casino.

As we move to six digits. The Keno machine will give \$1,600, the rest of the casinos will give \$1,400.00. So the six digit numbers, there's not much difference between that and the machine as there was with five numbers.

With seven numbers the machine will give you \$7,000 for a \$1 bet. Most other casinos will give \$5,000 with the exception of the Babary. They will match the Keno machine, and pay \$7,000.

Therefore, having the advantage of the advanced Keno game, and all the new methods of playing such as Caesars' "Winner Take All Specials", "\$250,000 Progressive Keno," "The Exacta", you can find an exciting and challenging day in mastering your astrological wit, and unlike the slots, you would have the advantage of hitting that big jackpot.

Lottery Games

The interest in America for lottery games is becoming more and more popular every day, with payoffs over \$1 million. Almost everyone knows the odds of winning a lottery are against you. But it's the fun of playing like holding a sweepstakes ticket. If you lose, you know that your money is going to do some good, and making someone else a happy winner. In order for someone to win someone else has to lose. Basically everyone has a turn within the cycle of life giving them the opportunity to win large hits.

Any time when playing a lottery number, it should be played when the planetary aspects and the Part of Fortune are in harmony with you. Numbers that come into your mind at the time should be placed as a bet. However, playing the lottery astrological, a chart would be needed to set up the time of draw, in order to determine the Part of Numbers. The states that have the lottery at the present time.

Arizona, they have the Pick Six. A game in which you pick 6 out of 36 numbers. The cost is \$1 a game and drawings are held every Saturday at 10:00 p.m. Consolation payoffs are on four and five numbers of the six numbers. Six out of 6 receive 65 percent of the prize money plus the rollover. The money made from the lottery in Arizona, goes to benefit local transportation.

The state of Connecticut has a Pick 3, Pick 4, and Pick 6 Lotto in which you pick 6 out of 36. Drawings for the lottery are held at 8:00 p.m. daily; and the Lotto is drawn 8:00 p.m. on Friday. Four and 5 numbers out of 6 give a consolation. Money from the lottery go to support education, law enforcement, hospitals and public services.

In the state of Delaware, they offer a Pick 3, Pick 4, and Pick 6 lottery games. The Lotto is 50¢ per game. Drawings are held at 6:28 p.m. every Thursday; also daily except Sundays for the Pick 3 and 4. Four out of 6 give consolation prizes. The pick six is 6 out of 30 numbers for Delaware.

The District of Columbia has the 3 digit, 4 digit, plus a Pick 5, in which one picks 5 out of 40—costing \$1 a game. There are no consolations, you must have all five numbers in order to win. Lottery profits are turned over to the State General Fund.

The state of Illinois offers the Pick 3, Pick 4, and Pick 6 out of 44 at 50¢ a game. The Lotto is drawn at 6:57 p.m. every Saturday. The Pick 3 and 4 are drawn daily at the same time. Consolations are 4 and 5 out of 6. Profits from the lottery go to the health and social services, education, income support, and other services.

In the state of Maryland, they also offer the Pick 3 and 4, and the Pick 6 out of 40 numbers at 50¢ a game. Drawings are held at 7:55 p.m. every Saturday. Consolations are given for 4 and 5 out of 6. Profits go into the state fund.

In the state of Massachusetts, they have a Pick 6 out of 36 at \$1 a game, and four digit. They also have a three digit of the four digit numbers, that you can pick on either side of the four. Drawings for the Lotto are held at 9:55 p.m. every Wednesday and Saturday. The money goes to support local aid funds and local arts.

In the state of Michigan, they have the Pick 3, 4, and 6 out of 40, at \$1 a game. The lotto drawings are held at 7:29 p.m. every Saturday. Profits go to the state.

The state of New Jersey, offer the Pick 3, 4, and Pick 6 out of 39 at \$1 a game. Drawings are held at 7:57 p.m. every Thursday. Profits go to the state.

The state of New York have the Pick 3, 4, and Lotto. The lottery is drawn at 10:15 every Wednesday, and every Saturday between 10:15 and 10:22 p.m. So a chart should be set up approximately at 10:20 p.m. Profits on the lottery go to the state.

The state of Pennsylvania, offer the Pick 3, 4, and the Pick Six Lotto 6 out of 40. Drawings are held every Tuesday and Friday at 7:00 p.m. Four out of 6 give a consolation. Profits go to the senior citizens of Pennsylvania.

The state of Rhode Island, offer the Pick 5 out of 40 at \$1 a game. It also has the four digit lottery game. Drawings are held at 7:29 p.m. on Tuesday, Thursday, and Saturday. Profits go to the state's general fund.

The New England lottery have a 3, 4 digit, and the Lotto. Drawings are held every Saturday at 7:59 p.m. Profits are divided among the states of Maine, New Hampshire, and Vermont.

The state of Washington offers the Pick 3 and Lotto 6 out of 40. Drawings are held at 7:00 p.m. every Saturday. Consolations are for 4 or 5 out of 6. The profits go toward education, human resources, government parks, and natural resources.

The state of California has been a recent state added to the lottery, but they don't have a Lotto yet. There are a few states destined for the Lotto such as Florida, Nebraska, and Kansas. Even the state of Texas might be caught up in lottery fever.

The prediction of a lottery number based on the astrological factors, is far from a perfect science where one can predict the outcome of a lottery number consistently. There are patterns that prevail based on the astrological premise that give one the edge in forecasting a lottery number. Even if the ratio was one out of a thousand. It would still be profitable considering what the Lotto pays today. For an investment of \$1,000 to win millions. Plus, through past research we now know this can be done.

There's two things that must be taken into consideration. One is the law of probability, and two, the cycles relating to the outcome of the single digit number, as well as combinations. Combining these factors with the astrological values that take place on any day in question.

Working with the three digit numbers, I have been very fortunate being able to predict the outcome of these numbers as a group. The problem still remains in predicting these numbers in exact order. Each of the planetary bodies are said to rule over a number. The Sun rules over number 1; Moon number 2; Jupiter number 3; Uranus number 4; Mercury number 5; Venus number 6; Neptune number 7; Saturn number 8; and Mars number 9.

This is generally where you look for a single digit number of the single digit root number. Meaning 2, 3, 4, 5 numbers add up to a single digit. Now to understand the full concept of lottery numbers, you must understand the Part of Numbers. As I have illustrated in all chapters for the Part of Fortune, How to Find the Part of Fortune, the same method is used to find the Part of Numbers. Whatever house the part of number might fall into, this will indicate the number for that particular event, etc. Example: The first house would apply to personal numbers— numbers you might receive on your license, social security card or a number assigned to you for a special event, etc. These are all personal numbers.

The second house, I have found through my research to be the main factor relating to lottery games. The second house is generally know as money numbers—anything associated with money. I've even found that closing stock market averages and other financial numbers correspond to this house.

The third house would be associated with numbers involving highways, phone numbers, license plate.

The fourth house would represent a street address, numbers assigned when purchasing a product, hotel number—numbers generally connected with real estate such as restaurants, homes, and commercial properties.

The fifth house generally represents the score of a sporting event, or numbers of players in the team. In certain cases, I have found that the team wearing the number corresponding to this house generally came out the winner.

The sixth house deals with numbers that might be assigned to you at work, or a tattoo either to yourself, or animal. It is also associated with numbers than might be given to servants.

The seventh house rules over numbers you might find on a work of art. Anything of a limited edition. It's also a number you might find on a marriage license, or a piece of clothing, furniture, or anything that is identified by number.

The eighth house is ruled over numbers you might find on an insurance policy, a death certificate. I have also found this house to be a strong secondary influence with lottery numbers. When there wasn't enough present in the second house, I could always go to the eighth house to fill in the six numbers needed.

The ninth house deals with numbers that you might find in a book such as the ISBN number. It can also be a number that is assigned to education such as school or college. It also rules over a number that might be given to one in the military.

The tenth house rules over numbers that might be assigned to you by the government, a number you might find on a land deed, airline ticket, or a special piece of jewelry such as a watch.

The eleventh house rules over numbers you might find on a piece of electronic equipment, organization, a radio or tv station call letters.

The twelfth house corresponds to numbers you might find on water vessel, hospital room, institutions such as jails.

This should give an idea on how Part of Numbers work. And whatever you're trying to forecast in relation to numbers, you would apply it to that house. Therefore, we are mainly concerned with the second house because we are looking for money numbers.

The following is the formula you'd use to find the part of each of the following numbers. (Some parts will effect more than one number.)

Predicting the Three Digit Lottery Numbers

The first thing I want to draw to your attention to, is the New Moon periods, also the Full moon periods. You'll see that the number one or zero will be evident. Let's look at the Chicago daily numbers game results for September 3 and 4 of 1984 during the full moon.

You'll see the 0, 9, 7 and the 3, 0, 8. The reason I'm bringing your attention to this, is because many times certain numbers will follow a zero. When Mercury is in retrograded motion 9s will follow a zero. Thereby 0, 9 would be more evident. Look at past results of your local state lottery, and you'll find that the 0, 9 combination in many of the numbers that have a higher than normal rate of hitting over other number combinations. You'll find this to have an accuracy rate of 30-40 percent.

So the first thing is to analyze the new and full moon cycle as it relates to your state lottery. Also, keep a root value pertaining to the new and full moon period. To find the root value all you do is add the three numbers to their total value. As an example: If you know the root value of 7 has a percentage of 40- 50 percent on a new moon period. If you know that using the 0 during this period, your selection in predicting a three digit number would be brought down to just six combination consisting of 007, 016, 025, 034, 079. Now if your state has a tendency for a 9 following the 0, then the only number you can play is 079. This would be your predicted number during the new moon period. Following you'll find the root value for the three digit numbers.

By going through the process of elimination of certain root numbers that have already hit during the month, this can bring you down, where a prediction based on the part of numbers and the moon cycle can pretty well determine what set of numbers would fit into the pattern. An edge in projecting the winning three digit number.

The Arabic astrologers and ancient civilization also had methods pertaining to numbers. But they were more interested in numbers as they pertained to cycles and events. Sometimes a lottery number can be quite easy to predict just by the slow-moving planets. Occasionally, you must use parts to figure everything in, and the percentage of

accuracy for a certain combination. Naturally if the chart tells you that root 6 is due, and prior to this 6 has come in three different times—the law of probability is against you. When you don't have both influences together, whereby root 6 is due to hit, and the astrological factors show it to hit, then you know it's the right time. However, when it has already hit, the chances of it hitting again is nil. There are times when the moon is in a certain sign for a period of time and the Arabic part of that number is aspected, you then know the number can repeat again. Such is the case with the moon in the sign of Pisces.

On October 17, 1983 the combination of 3, 6, 7 hit. Look at the chart of October 17. You'll see that you have a cluster of planets in the sign of Libra. Libra is ruled by the planet Venus; therefore you know that Venus rules over this day of play. We also have three planets in the sign of Sagittarius. We know Sagittarius is ruled by Jupiter and Jupiter is number 3. With the moon in Pisces we know this is ruled by Neptune and Neptune is number 7. On this particular day, we know that 3, 6, 7 would be the three main numbers that are indicated on the chart.

The drawing for the daily numbers game takes place in Illinois at 6:55 p.m. I want you to look at the part of 6. We find it at 24 of Aries 10 degrees. The part of 7 is at 12 degrees of Leo. Both are in trine aspect with each other. We find that the part of 3, is at 24 degrees of Cancer 58 minutes. Also, I want you to look at the part of 9, that is at 26 degrees of Aries—the same as number 6. Therefore, if you're playing a four digit number, you would go 6, 3, 7, 9. Take a look at the following day when the moon is still in Pisces...aspects

still similar to each other on October 18, the same three numbers recurred again—7, 6, 3. The four digit numbers drawn on that night were 9, 3, 1, 9. One digit away from being exact on the four combinations. This wasn't just by chance that the 3, 6, 7 came back to back. Astrologically, it was evident it would hit. What I'm trying to illustrate here, is that the slow moving planet numbers seem to come in no matter what state the lottery is in. It depends on the house system and the parts at the time, to relate to these numbers for that area or combination where that number would come in.

Playing a three digit number means you could aspect the number that's going to hit like a 1 or the 0, and play it with all combinations there is. This would cost \$100 or you spend \$300, and put them in exact order. If you won the three digit, you would win the pool which generally is \$500 or more.

Looking at the influence of the new moon from September 1982 in Illinois to November 30, 1983. On September 17, 1982 the combination of the three digit was 6, 1, 9. The four digit was 2, 0, 7, 2. You can see the one hit. The next new moon period would be October 18, 1982 with the combination 7, 9, 1. The next period was November 15, 1982. You can see the 0, 6, 3. The next moon period was on December 15, with 8, 0, 0. Prior to December 14, the four digit 1702 number came in. January 15, 1983 2, 0, 9 hit. The next new moon period was February 14 with 0, 3, 8. The next moon period came on March 14, 1983 with 2, 4, 9—the combination didn't hit on this day. The next moon period was April 13, 1983 with 0, 0, 2. The next moon period was May 12, 1983 with 0, 6, 9. The next period was June 12, 1983 with 0, 8, 0. Almost the same combination that hit on December 15 very nearly in opposition

aspect to 8, 0, 0. You can clearly see here what happens on the opposition of each sign to the new moon. This has happened in many cases with a lot of numbers. The next new moon period was July 9, 1983 with 1, 1, 5. On August 7, 1983 the next new moon the numbers were 0, 0, 6. The next new moon period was September 7 with 2, 9, 1. The next period was on October 6 with 1, 5, 3. The next new moon period was November 4, 1983 with 5, 2, 9 which didn't hit, the four digit number on that day came in 7, 6, 7, 0. you can see, out of fifteen new moon periods only two didn't come in with the 1 or the 0.

After selecting your three digit number, if you'd like to try for the exact combination, you can select with the process of elimination. For instance, if you select a 124 combination, this would give you a 1, 2, 4; 1, 4, 2; 2, 1, 4; 2, 4, 1; 4, 1, 2; and 4, 2, 1. Say the number prior to this date was a 2, 3, 8. Always add the first two digits 2 + 3 = 5 and then 3 and 8 would equal a 2. So the first two numbers adding up to a five or the last two numbers adding up to a two, you leave out. So first, you would leave out the 1, 4 and 4, 1. Out of the

Four-Digit Lottery Numbers

Applying the astrological factors to the four digit numbers, generally you would use the same method as the three digit number, using the root value. The root value can also be taken from the numerology factors, dealing with the date and month. For instance let's say it's February 6th. You can use a combination with the root number of 8, or you can use the root number 6. Whichever one offers the greatest opportunity through process of elimination. If the 8 root value hasn't come in within ten days, but the 6 has, it would make more sense going with the 8 root number. Then, selecting your number in the row of 8 from the transiting planets in the chart, and the Part of numbers. Following is a list of the four digit numbers, along with the root value.

In a four digit number consisting of four single numbers, to play them all in exact combination would cost \$24. If you have four digit numbers consisting of double numbers, it would cost \$10. If you have a four digit number consisting of three of the same number, this would only be four combination.

Projecting the exact order of a combination, we apply the same method we did with the three digit by adding the first two numbers. Example: If the number was 2, 6, 9, 9, the first two numbers would add up to an eight; the next would add up to fourteen for a value of 5; and the last two add up to eighteen for a value of 9. Therefore, you wouldn't want your numbers to add up to these same values as the previous day. Or, you can even go back and see the ratios of these numbers hitting in this pattern, thereby you can pretty well turn your four digit number around with the probability of it hitting would be exact. Payoffs are much better for an exact number paying \$5,000 or more than a combination of any four which can be as low as \$300. So it's worth taking the time to analyze a four digit number, that you do project from the chart in order to go after the big money.

Now in looking at the Part of Numbers. Say you have 14, 17, and 26 showing in the second house. How you would play these numbers in a four digit, would be 1417, 1426, 1414, 1726, 2614, and 2617. This would cost \$6. Doing this on paper daily, you can have a feel for it and also be able to keep an accuracy of its performance.

With one hit out of a thousand tries it would still be worth it considering you'd be receiving \$5,000 for the \$1,000 investment. So by analyzing it and doing it on paper, you can determine if it's worth it or not to speculate on the four digit number in your area. Remember: When working on a three or four digit number, the first thing you want to aspect, is the root number that is due. After finding the root number, you want to go to the Part of Numbers, and find which combination fits best with that root number for the day. Then, aspect the chart and apply the numbers to their exact position. You can also apply the three and four digit numbers to the chapter on roulette.

Lotto

Lotto is one of the biggest attraction out of all these lottery games, especially with payoffs over \$1 million. The first thing you must understand, is the astronomic odds of hitting a lotto. Picking six out of thirty, the odds are 296,888 to 1. To pick five out of thirty, the odds are 2,062 to 1. To pick four out of thirty, is 72 to 1. With thirty-six numbers to pick six out of thirty-six, the odds are 1,947,792 to 1. Picking five, the odds are 10,821 to 1. Picking four numbers, 1 out of 299. With thirty-nine numbers, the odds of picking all six are 3,262,623 to 1. To pick five, the odds are 1 out of 16,478. To pick four numbers, the odds are 412 to 1. With a forty number lottery, to pick six out of forty or numbers higher than forty such as forty-four numbers become astronomical with 1 out of 7 million. There are some states and lottos in Canada with lottos as high as forty-nine numbers.

Defying all the odds through research since 1980, we were able to predict at least one lotto that would hit during the year. Somewhere in the lotto states. The only problem was that we weren't able to pinpoint the state. In our newsletter the Astro- Geographic Determinism Forecast, we were able to hit six out of six in Ohio; and six out of six in Massachusetts. A lotto that paid over \$3,700,000. Plus we had many four out of six; three out of six; and we also had a few five out of six. One in Michigan with odds one out of eighteen thousand.

Earlier in this book, I spoke about the one, two, three method in playing roulette. I have also spoken about this in playing the lotto by using all the single digit numbers that would add up to one, two, three. During our research, there was one such hit in the state of Illinois. With the moon aspect in the sign of Cancer ruling 2. Any time you have a combination that either rules the 1, 2, 3, that's when you want to go after it. And all the combinations were correct on July 6, 1985. Not every state did the 1, 2, 3 combination come out, but again you're not looking to be perfect. You're looking for a ratio that allows you to hit every so often. And on July 6, 1985 the number 10 hit (single value is 1), 20 hit (single value is 2), 29 hit (single value is 2), 30 hit (single value is 3), 38 hit (single value is 2), and 39 hit (single value is 3). So if one would have boxed these numbers consisting 1, 2, 3 they would have picked up this lotto in the state of Illinois.

If you go back and look at lottery numbers that have already hit in your state. Break each of the double digits down to a single digit value. Example: Let's say you were born January 8, 1980. January would rule the number 1, root value number 8, the 8 root value, and 1980 the 9 root value. So if you played all the combinations of 1, 8, 9 and apply them to your lottery, this would be a numerology factor broken down to the root value applying to the outcome of a lottery which can also be a lot of fun especially if you hit. But you are dealing with percentages. So you want to find how many times a certain group number comes in and how strong it is. Usually if you check the strongest top three root numbers and combine them, this will give you in play lotto numbers.

The first illustration I want to show you in forecasting the outcome of the lotto numbers, is for February 25, 1984. If you look at the chart for the state, the second house is between 16 degrees of Libra, and 16 degrees of Scorpio. In the second house, we have the planet Saturn which rules over number 8, and Pluto which is the co-ruler with Mars over number 9, and retrograded with number 11. The only numbers we have to fit in the lotto is 16, 29, 38, 30 and 10. So we have 8, 9, 10, 11, 16, 29, 30, 38 and 39. These are the parts that are in the second house. So we have a total of nine combinations. We have nine numbers. To wheel these nine numbers and

to cover them all in the lottery, you would need 84 combinations. If you were playing a \$1 lotto, it would cost \$84. A 50¢ lotto \$42. As you look at the results, you would find the combination of 8, 9, 10, 11, 16, and 30 hit paying \$2,113,180 to two winners.

I don't want to give anyone the impression that this happens every day, however, this does defy the odds of playing the lotto by guessing the numbers. Year after year we have at least hit one combination of six out of six. When you figure there's about thirteen states that have a lotto drawing each week, and multiply it by fifty-two weeks, you're looking at the odds of 1 out of 676. Using the Part of Numbers to determine a lotto. Those are much better odds that 1 out of 3, 5, or 6 million. Although there's no sure way of hitting the lotto, the most promising comes from the Part of Numbers, that are placed in the second house of the chart.

There's two ways to apply the numbers. The one I like best, is doing a quarterly chart. This is based on when the Sun goes into one of the Cardinal signs, and at that time the chart is set up. As an example, when the Sun goes into the sign of Capricorn, Aries, Cancer, and Libra. These divide the different seasons of the year, and are equinox cycles. The numbers that are in the second house during that time, have a trend to come in at least once during the year. Sometimes there might only be a few number in the second house, and you might have to go to the eighth house, or use planets that are in the second house itself and finding six numbers that you can play the lotto with. There are other times where you can have as many as twelve numbers. Once you have this, you have to know how to tie them in so you can cover each combination.

As an example, I will use June 21, 1986 only because on this date there are no numbers that are in this Part of Numbers in the second house applying to the lotto. If we look at the second house, we know it's between 17 degrees of Libra and 17 degrees of Scorpio. The only Part of Numbers that fit into this house are 51, 61, and 78. This would be good for playing a four digit number for the quarter. The numbers would be 1417, 1425, 1714, 1726, 2614, and 2617. But we're interested in finding the lotto. The next house you go to is the eighth house. If you don't get the numbers you need from the eighth house, then go to the eleventh. If you don't get the numbers you

need, then you have to go to the fifth house. As we look at the eighth house, I have marked this out with the circle, the large circle around the sign and degree. In the eighth house we find the only numbers we're able to use is 3 and 36. So now we have to go to the eleventh house. I have marked it out with the signs between 24 degrees of Cancer and 25 degrees of Leo. All we have here is 16 and 29, this is only four numbers. We still need two more to play the lotto. So we go to the last resort, the fifth house that is between 24 degrees of Capricorn and 25 degrees of Aquarius. I have circled these signs, and the only numbers we can use are 2, 4, and 8. This gives us a total of seven numbers we can use for this quarter, starting with June 21st. Those numbers are 2, 3, 4, 8, 16, 29, and 36.

Now look at the chart for a seven number combination. You'll find A, B, C, D, E, F, G. Now, put the lowest number in A, next in B, C, etc. From these seven numbers A should be two; B should be three; C should be four; D should be eight; E should be 16; F should be 29; and G should be 36. Put these numbers in order as you see the letters going across. The total seven tickets should look like this:

- First ticket: 2-3-8-16-29-36.
 - Second ticket: 2-3-4-16-29-36; 2-3-4-8-29-36; 2-3-4-8-16-29; 2-4-8-16-29-36; 2-3-4-8-16-36; 3-4-8-16-29-36.
- To use an eight number system for six of six, you have 28 combinations as follows:

EIGHT LOTTO NUMBERS

A _ B _ C _ D _ E _ F _	A _ C _ D _ F _ G _ H _
A _ B _ C _ C _ G _ H _	B _ C _ D _ E _ G _ H _
A _ B _ D _ E _ F _ F _	A _ B _ C _ D _ F _ H _
A _ C _ D _ E _ F _ G _	A _ B _ C _ F _ G _ H _
A _ D _ E _ F _ G _ H _	A _ B _ E _ F _ G _ H _
B _ C _ E _ F _ G _ H _	A _ C _ E _ F _ G _ H _
A _ B _ C _ D _ E _ G _	B _ C _ D _ F _ G _ H _
A _ B _ C _ E _ F _ G _	A _ B _ D _ E _ G _ H _
A _ B _ D _ E _ F _ H _	A _ C _ D _ E _ G _ H _
A _ C _ D _ E _ F _ H _	A _ C _ D _ E _ F _ H _
B _ C _ D _ E _ F _ G _	C _ D _ E _ F _ G _ H _
B _ D _ E _ F _ G _ H _	A _ B _ C _ D _ F _ G _
A _ B _ C _ D _ E _ H _	A _ B _ C _ E _ G _ H _
A _ B _ C _ E _ F _ H _	A _ B _ D _ F _ G _ H _

Now you can use these Arabic parts in predicting either the 3, 4, 5 or 6 digits for the lotto. If doing it for the lotto and daily numbers, you can use it two ways. You can set up the chart for the night of the draw, or you can do what is known as a quarterly chart. This is done when the Sun enters the sign of Aries, Cancer, Libra, and Capricorn. These are the equinox points of winter, spring, summer and fall.

The numbers forecasted from these points for the three months will give the numbers subject to hit in that quarter. From my research, this has worked out very well. The following are the Sun Ingress Equinox Lotto Numbers from the year 1985-2000.

1985—2000

1/1/85	— 3/19/85	2-6-7-9-13-19-33-34

THE PICK-3

When making a prediction for the pick-3, I look for an identifiable pattern. I make note of the sign Jupiter is going into for 12 months. On August 27, 2003, Jupiter will go into the sign of Virgo. From August 2002 through August 2003, I would make a list of all the numbers that hit with the moon in the sign of Virgo, and they would be on my list to play. I would then track each of these numbers to see if I could identify a past pattern. For the pick-3 in Florida, the number of 6-7-8, I used to narrow down to Aquarius and Gemini.

Here were some of the past patterns that I hit on with the moon in **Aquarius**.

05/26/89 - 876
02/24/90 - 678
09/30/90 - 678
06/06/96 - 867

Moon in Gemini:

04/27/90 - 678
04/18/91 - 786
01/05/93 - 687
02/02/93 - 768

Numbers will change under patterns of a 7-year cycle from Uranus, as 678 did in 1997, changing over to the pattern of Aries-Libra-Scorpio.

Moon in Aries:

04/06/97 - 786
06/25/00 - 678

Moon in Libra:

12/22/97 - 687
03/12/01 - 768

Moon in Scorpio:

12/11/02 - 687

In 2003, the pattern changes again for another seven years. When playing nine numbers, you can use the stats from the first, second, and third digit, going $3 \times 3 \times 3 = 27$ combinations. You can use a template in a \$1.00 straight box that gives you half the win, and half the box price for \$11.00. By using the template below.

Take three from the first digit, and place them in slot 1, 2, and 3. Take three from the second digit, and place them in slot 4, 5, and 6, and three from the third digit, and place them in slot 7, 8, 9.

1 4 9
1 6 7
1 5 7
1 6 8
2 4 7
2 5 8
2 6 9
3 4 8
3 5 8
3 5 9
3 6 7

12 13 24 46	70 25 36 47	30 78 68 50	96 68 40 45	13 73 91 16
R1 0 56	23 1 78	34 2 67	50 3 97	65 4 27
26 7 77	96 1 89	37 2 83	15 3 91	81 4 39
85 19 98 88	60 10 72 99	48 79 90 35	26 38 59 71	26 80 25 92
10 19 36 18	57 29 41 80	20 54 90 50	61 20 31 43	40 21 32 45
17 5 67	51 6 30	19 7 40	59 8 53	68 9 65
28 14 74	74 6 90	30 7 48	12 8 64	25 9 76
40 61 62 73	94 87 43 71	52 63 80 95	30 29 86 75	48 47 83 87

In the Pick-3 lottery, you have 720 unique digits, 270 double-digits, and ten triple-digits. The stats tell you that out of every ten lottery draws, you can expect seven of them to be unique. You can determine from your own state's lottery, the percentage that one of the three numbers will appear in the next drawing.

Next, look at the Cash-3 sum totals and box combinations. This table gives you the total sum of the bet-3 number. Very seldom will you have a repeat of the total value. Numbers adding up from 11 to 16 would have your highest percentage of hitting. By keeping track of the total root value, this will add in the process of elimination. If the sum total, 8 has not hit in a reasonable time, you have ten combinations. From this you have to determine the span of time you want to play. If you pick a number from the last pick-3 draw, and the number you decide to go with is 4, staying with the sum total of 8, you could only use 0-4-4, 1-3-4, and 2-2-4.

Next, you will find ten boxes with a number in the middle, and 12 numbers around it, that middle number can go in as the first or third digit. Let's say you're looking for one number to play from the combinations you have with 4. If you look at the box with 4, all you could play is 4-1-3 or 1-3-4. Also, keep a stat sheet, for every time a box hits. This will give you the month and probable date for the next hit.

Cash-3 Sum Totals and Boxed Combinations

Sum Total	Boxed Combinations														Total Combinations	
27	999															1
26	899															1
25	799	889														2

04	004	013	022	112												4
03	003	012	111													3
02	002	011														2
01	001															1
00	000															1

When using the part of numbers, make note of when three singles show up in the winning pattern. When this happens, I will usually use a playing window, in which I double up for 25 plays (2,4,6,8 tickets...etc.) The most important thing in playing the pick-3 is to establish the pattern.

THE PICK-4

The Pick-4 offers a greater payoff with one additional number. Most pick-4's are fixed at \$5,000.00. With odds of 10,000:1, you have a better chance of winning the same amount as a pick-5, using multiple tickets. The same rules apply to the pick-4 as to the pick-3. We know that when there is a new or full moon, some of the the number of 1-0-9 will appear in top four digits. What is the possibility of all three of these numbers appearing in the top four.

This is what is known as a key play. Let's look at some past results with the 1-0-9 and the moon sign in the Florida Pick-4 lottery.

From these dates, you can determine that they are most likely to hit when the sun is in Taurus, Scorpio, and Sagittarius with over a 50% accuracy, and when the moon is in the sign of Cancer, Leo, Capricorn, and Pisces. In those months with the moon in these signs, you have the tools that will identify the winning pick-4 number. When you combine the past results with the part of numbers, you are then able to focus in on the winning combination.

For myself, I've been able to hit and share the predictions with many of my subscribers that took advantage of this opportunity and won hundreds of thousand of dollars. Four numbers that are known as the Mercury connection are 1-2-3-6. I use the 1-3-6 as my key-in. Let me share with you some of the past results, along with the moon sign, and then illustrate how I use some of these numbers in the Florida lottery.

From the stats, I know that when the sun is in Aries, Cancer, Virgo, or Sagittarius, my chances of hitting with 136 is over 50%, and when the moon is in the sign of Taurus, Cancer, Sagittarius, Capricorn, Aquarius, and Pisces, the chance are 2:1 better than the remaining six signs.

To illustrate this to you, let me use the sun in Virgo as an example. My target number was 1635, to be played in September of 1996 on the dates of...

09/02
 09/03
 09/06
 09/07
 09/19 - 26

These dates cover the moon signs. The risk factor of this play would be \$120.00 with ten tickets for each play. The reward would be \$50,000.00. Many of our subscribers were happy, as it hit on September 3, 1996 with the moon in Taurus. The lottery will not put all of the winning tickets on one W-2. You have to file each ticket individually, giving you ten W-2's and ten checks at \$5,000.00 each.

At this point of play, Jupiter was four degrees of Taurus. Jupiter was at 7 degrees of Capricorn, Mars at 25 degrees of Cancer. My next play for this number would be from July 3 - 9, 2002 because Mars will be back in Cancer at 25 degrees, and Jupiter at the opposition point in the sign of Cancer.

The number hit on July 5, and came in 5631...backward from the 1365. So, I only ended up with the box backup ticket that paid \$200.00. The bet at 10x each was \$70.00. In hind sight, being that Jupiter was in opposition, the play should've been backward, but this is all the process of learning.

Venus is another planet that can be used to identify the cycle of a pick-4

number. One of the patterns I use for the Mercury number, is Venus 4 - 11 degrees of Aries.

May 6, 1998, 0613 hit early at 2 degrees of Aries; February 26, 1999, Venus six degrees of Aries, 1063 hit; May 12, 2001, it came in 1036 with Venus at 9 degrees of Aries; March 13, 2002, we told our readers to get the 1063, 100 times, as we were sure that it would hit back on this cycle, and it did on March 13, with 1063 with Venus at 11 degrees of Aries.

THE BACK OF THIS DOCUMENT HAS AN ARTIFICIAL WATERMARK - HOLD AT AN ANGLE TO VIEW

I will play this number again from February 14 - 18, 2004.

The cycle of the sun in Cancer, is a little more expensive to play, with ten straight ticket, ten box tickets, and a backup of the remaining nine tickets. You have a cost of \$29.00 for 30 days for a total of \$870.00 or less if the play should hit early. This play use to be 100% accurate, but in the past few years, the cycle has been broken. June 26, 1997, 1362 hit; July 7, 1998, the 1136 hit. Then in 1999, there was no hit at all. On June 28, 2000, the 6143 hit, and in 2001...another year with no hit. Then on July 5, 2002, we missed the exact hit and only won on the box. If the play does not hit in 2003, I would consider this a broken pattern, and would switch to one of the other months, where the Mercury is 100% accurate.

Placing the numbers in exact order is a process of elimination, you have three rows of numbers, the first, second, and third, which the odds of that number hitting is 100:1. If your number is 1236, and 23 has already hit in the middle row a few times, you would want a different number. This is how I set it up. If my number is 0136, I have three rows set up with the following numbers

01
03
06
13
16

36
10
30

I go back over the results, and mark an 'X' by each number that has hit. Then with the remaining numbers, I put them in order based upon what has already come in from the first, second, third, and fourth position. If you do not care to go through all of the astro work, you can use the process of elimination in a template that consists fo 24 combinations. You can get a box and straight using the same concept as the pick-3 template.

Pick-4 Template:

THE PICK-5 AND PICK-6 GAMES

In making a prediction for the Pick-5 and Pick-6 Lotto, I like to use a template, then break the numbers down in the template to a single root value from 1 - 9. Then determine from the stats and astrological patterns as to when a root value will hit. There are also nine groups of numbers that add up to a single root value as follows...

Root Value -	01	02	03	04	05	06	07	08	09
	01	02	03	04	05	06	07	08	09
	10	11	12	13	14	15	16	17	18
	19	20	21	22	23	24	25	26	27
	28	29	30	31	32	33	34	35	36
	37	38	39	40	41	42	43	44	45
	46	47	48	49	50	51	52	53	54

After I calculate the part of numbers, I narrow the numbers down to 18, by taking two from each group. If I happen to have three or more from the same group, I narrow it down to two. If the part of numbers give me under 18 numbers, I then supplement the rest, using the process of elimination. I then key in on two numbers. If my selection is two numbers from the same group, I use the template that has those numbers.

Example: If my numbers are 2 and 20, I use the template with the numbers 2-11-20-29-38 for my pick-5. Then I fill in the blanks with the numbers that represent the root value. The first row has 1-4-9. This means that a number from the 1 group will go in the 1 spot; an number from the 4 group will go in to the 4 spot; and a number from the 9 group will go into the 9 spot. So my top three could be 19-31-27.

The easiest way to do this for the pick-5 is to number your selections from 1 to 18 and put the number in the appropriate group and then fill them in on your template. After the template is filled in add each group up, and then put them in the appropriate root groups. Consecutive numbers you can choose either template that represents those numbers, and the same

with single numbers.

If the part of numbers consists of under 12, you can tie in the two key numbers and box them with the remaining numbers. In 1994, with the AstroView Show and newsletter we illustrated the power of the part of numbers by hitting four pick-5's between January and April. Using the key of 21 and 26. Two similar hits that were use to make the prediction was from November 12, 1990 (moon in Virgo) with the numbers of 10-13-21-26-28. On August 21, 1991 (moon in Capricorn)...11-21-24-26-32.

The enclosed W-2 from the hit on January 12, 1994 (moon in Capricorn), the numbers of 4-8-12-21-26 hit. Then on April 22, 1994 (moon in Virgo), the numbers 14-16-21-22-26 hit.

At the American Federation of Astrologers (AFA), I gave a workshop, explaining the root value of single numbers, and gave them five numbers to play for the week starting on July 10. As you can see from the enclosed ticket, 3-8-11-24-25 hit four days later on July 14. Everyone in attendance who had played it had a winning pick-5 number.

=====	=====	=====	=====

There's another type of ticket I like to play, which is called the Mercury connection that consist of the number 1, 2, 3, 6, 10, 11, 12, 13, 16, 20, 21, 22, 23, 26, 30, 31, 32, 33, 36. As you can see from another winning ticket we had in 1994, that our Mercury ticket hit on August 15. The duration of the play was July 20 - August 20.

When playing the pick-5 on a full template, you will have about 80 combinations. Breaking it down to the root value, you'll have from 6 to 11. There are other process of elimination tactics that you can use by leaving out the tickets that have any of the previous numbers in them, or vice-versa, only use those tickets that have numbers which have won from the previous games.

You can also leave out tickets with too many consecutive numbers. In playing a Pick-6 Lotto, do you know what your chances are of hitting six consecutive numbers? Zero! Out of a study of 15,000 draws, ten of them had five consecutive numbers, 70 with four consecutive numbers with single numbers.

Three consecutive numbers, with three single numbers hit 816 times. The two highest stats with 41% was two consecutive numbers with single numbers. At 45% all single numbers. This tells us that 86% of the Pick-6 Lottos will consist of only of the above two. By keeping the stats of every ten draws, you can determine if it's going to be two consecutives or all singles.

In use the template for the Pick-6 Lotto, I like to use both stats from the top, using the same root value plays as the pick-6, and after having the part of numbers I use a guide of what attracts the other numbers.

Sun - 10-11-20-21-22-23-40-41

Using The Lottery Worksheet

On the Lottery Worksheet, in row one, you want to put the degrees of the ascendant and add it to the planet. Whatever it equals to, place that number in row three. Next you want to subtract the planet degrees from this point and use row five for the balance of the degrees. If you cannot subtract, you would have to add 360 degrees to the total, and then subtract.

Then in row six, break it down to the degrees and sign. Make note of the degree and sign that fits in to the second, fifth, eighth, and 11th house. The second house is the money numbers, and generally where you'll find your key numbers. For additional numbers you go to the eighth house, and connect them to your second house numbers. If you need more, go to the fifth, followed by eighth.

You can play the set of numbers in the second house or use the wheel by taking two numbers from each root group. This would give you 18 numbers. If a root is not available from your selections, find that root which has not hit from the group and add that to your selection of numbers. You can also use the part of numbers in reverse for additional numbers. The group of numbers will generally be good from five to 12 weeks.

Next you want to get the stats for your state. By going back 12 months, this will give you the percentage of accuracy of these numbers hitting in your lottery.

Root Value

From the pick-5 templates, you can also use three root values, giving you a total of six digits. In the Big Game Mega Millions. This pattern, using the same root as the MegaBall, has an accuracy of hitting one out of ten, since the new Mega game started on May 17, 2002 with the following hits...

06/04/02 - 25-29-18-**03-30** - **M-48**
08/30/02 - 31-32-**06-42-51** - **M-42**
10/08/02 - 18-47-50-**34-43** - **M-25**
06/28/02 - 18-50-51-**31-49** - **M-04**
08/09/02 - 07-23-43-**17-44** - **M-26**
12/24/02 - 08-24-39-**43-52** - **M-43**
12/27/02 - 11-14-26-**30-39** - **M-03**
01/07/03 - 16-28-34-**15-51** - **M-33**
01/21/03 - 04-48-51-**41-50** - **M-23**
03/11/03 - 15-26-39-**10-28** - **M-10**

You can determine the root value by setting up a work page consisting of 81 combinations with the root value of the first five and the MegaBall. On June 4, 2002, the number would be **53**. What you are doing is counting from 11-99 and leaving out any number where the second digit is zero (0). Then with the process of elimination, you are able to place the sixth number in without wasting extra money. You can also use all single root values. All you do is take two numbers from the root value and this will give you a total of 18 numbers.

There are nine root value groups that you can choose from.

Group of 6:

Root 01 = 03-04-06-07-08-09
Root 02 = 03-05-06-07-08-09
Root 03 = 04-05-06-07-08-09
Root 04 = 01-02-03-04-05-07
Root 05 = 01-02-03-04-05-08
Root 06 = 01-02-06-07-08-09
Root 07 = 01-02-03-04-06-09
Root 08 = 02-03-04-05-07-09
Root 09 = 02-03-04-05-06-07

Group of 5:

Root 01 = 02-05-06-07-08
 Root 02 = 01-02-03-06-08
 Root 03 = 01-03-04-05-08
 Root 04 = 03-04-07-08-09
 Root 05 = 01-02-04-07-09
 Root 06 = 02-04-05-06-07
 Root 07 = 01-02-06-07-09
 Root 08 = 02-04-05-06-09
 Root 09 = 01-04-06-07-09

For example: In Florida, we have to pick-4, then the MegaBall. Let's say the stats tell me to play the root of 1, which consists of 2-5-6-7-8. I have to take these numbers and put them in groups of four with the remaining number being the MegaBall.

02-05-06-07 = 02 · M-08 = 28
 02-05-06-08 = 03 · M-07 = 37
 02-05-07-08 = 04 · M-06 = 46
 02-06-07-08 = 05 · M-05 = 55
 05-06-07-08 = 08 · M-02 = 82

Any of the that have hit already, would be eliminated. Let's say 37 is the only one I could play, this would be my only ticket of these five numbers. By looking at the aspects, you can almost determine which one is most likely to hit.

Let's use the template for the Big Game MegaBall, and set it up from April '03 to April '04. We're going to use the root of 2, so on every ticket, you want to put 2 and 20. Your mega ball is also going to be 20. This bet will be \$76.00. You can add another mega ball, #29, the tickets will be \$152.00, and if you want to add a third mega ball, #38, this will bring your bet up to \$228.00. To play, just using 20 as your mega ball, will run you about \$8,000.00 per year. All the numbers you have in the template, you mark them down on the card.

We're using a total of 18 numbers for the top five. In each of the spots on the template, we're entering the following numbers...

01 = 28
 03 = 48
 04 = 04
 05 = 14
 06 = 24
 07 = 25
 08 = 35
 09 = 27

- 10 = 37
- 12 = 21
- 13 = 31
- 14 = 32
- 15 = 33
- 16 = 52
- 17 = 44
- 18 = 36

As you look at the template, you will see that we have 28-04-27 on the first row. You enter these numbers, along with 02 and 20 and the mega ball 20, and do the same with each line until all 76 lines are marked out.

Pick 5 Keys [2-11-20-29-38] Mega Ball 20 - Tik 2: 29 Tik 3: 38 - April '03 through April '04
